Visualization in Scientific Computing Michel Grave, Yvon Le Lous, W. Terry Hewitt, 2012-12-06 Visualization in scientific computing is getting more and more attention from many people Especially in relation with the fast increase of computing power graphic tools are required in many cases for interpreting and presenting the results of various simulations or for analyzing physical phenomena The Eurographics Working Group on Visualization in Scientific Computing has therefore organized a first workshop at Electricite de France Clamart in cooperation with ONERA Chatillon A wide range of papers were selected in order to cover most of the topics of interest for the members of the group for this first edition and 26 of them were presented in two days Subsequently 18 papers were selected for this volume The presentations were organized in eight small sessions in addition to discussions in small subgroups The first two sessions were dedicated to the specific needs for visualization in computational sciences the need for graphics support in large computing centres and high performance networks needs of research and education in universities and academic centres and the need for effective and efficient ways of integrating numerical computations or experimental data and graphics Three of those papers are in Part I of this book The third session discussed the importance and difficulties of using standards in visualization software and was related to the fourth session where some reference models and distributed graphics systems were discussed Part II has five papers from these sessions

New Computing Techniques In Physics Research II - Proceedings Of The Second International Workshop On Software Engineering Artificial Intelligence And Expert Systems In High Energy And Nuclear Physics Denis Perret-gallix, 1992-09-04 A vivid example of the growing need for frontier physics experiments to make use of frontier technology is in the field of Artificial Intelligence AI and related themes By AI we are referring here to the use of computers to deal with complex objects in an environment based on specific rules Symbolic Manipulation to assist groups of developers in the design coding and maintenance of large packages Software Engineering to mimic human reasoning and strategy with knowledge bases to make a diagnosis of equipment Expert Systems or to implement a model of the brain to solve pattern

recognition problems Neural Networks These techniques developed some time ago by AI researchers are confronted by down to earth problems arising in high energy and nuclear physics However similar situations exist in other big sciences such as space research or plasma physics and common solutions can be applied The magnitude and complexity of the experiments on the horizon for the end of the century clearly call for the application of AI techniques Solutions are sought through international collaboration between research and industry

New Technologies for Supercolliders L. Cifarelli, Thomas Ypsilantis, 2012-12-06 The present volume is based on the proceedings of the 12th Workshop of the INFN ELOISATRON Project held at the Ettore Majorana Centre for Scientific Culture EMCSC Erice frapani Sicily Italy in the period September 15 20 1990 The proceedings deal with the presentation of New Technologies for Supercolliders Three new energy frontiers 16 40 and 200 TeV are now opened up for the future of Subnuclear Physics Basic problems above the Fermi energy are crowding up but no one knows the energy levels needed for their solution This is why the technology for experiments with the new generation of Supercolliders needs to be pursued having in mind the problems which are of common interest in the three energy frontiers The primary purpose of the Workshop was to contribute towards the highest energy limit in the search for new instruments and new technologies Furthermore the present status and performances of various detector technologies were reviewed The possible options for a powerful apparatus whose goal would be the discovery of the top Higgs and SUSY particles in a very high energy high rate environment were finally analysed The Workshop was sponsored by the Italian National Institute for Nuclear Physics INFN the Italian Ministry of Education the Italian Ministry of Scientific and Technological Research and the Sicilian Regional Government We are thankful to the staff of EMCSC for their efficient and warm support
