**Chemical Literacy and Writing Chemical Reactions** Nikolay Gerasimchuk, 2022-09-12 Writing chemical reactions in general and inorganic chemistry is not a trivial task. However, writing reactions for chemical processes correctly is a clear indicator of proficiency and competence in a subject. Unfortunately, very few students grasp the concept of the correct writing of chemical reactions quickly and so are unable to move through topics of general analytical and inorganic chemistry freely. Because the ability to write and balance different types of chemical reactions is a fundamental issue, this becomes a key question of chemical literacy. The successful writing of chemical reactions includes two components: the prediction of products of these reactions and their possible variations and balancing these reactions providing a material balance between starting compounds and reactions products. This book explores that element of the teaching of the fundamentals of chemical literacy: writing complete equations of chemical reactions and balancing them. It contains 49 figures, 22 schemes and 12 tables and 93 problems with answers. This book will be very useful for high school students interested in chemical sciences, higher education teachers, students in colleges and universities majoring in chemistry and biochemistry, and chemistry professionals working in industry. It also contains information about properties of the most common elements and applications of a variety of their chemical compounds.

**Principi di Analisi Farmaceutica** Vanni Cavrini, Vincenza Andrisano, 2019-11-01 Il presente testo, realizzato con il contributo di competenza ed esperienza di vari docenti e ricercatori, viene proposto come una guida all'Analisi Farmaceutica i cui obiettivi possono essere così delineati: Identificazione di una sostanza medicinale e caratterizzazione sia della sua struttura chimica che dello stato fisico: solido cristallino o amorfo; sotto cui si presenta analisi qualitativa per i loro effetti su attività terapeutica e tossicità; Determinazione del contenuto di sostanze medicinali in formulazioni farmaceutiche o estratti da piante medicinali e di eventuali loro impurezze; analisi quantitativa; elementi fondamentali per definirne la qualità; Sviluppo di metodologie separative e tecniche estrattive; impiego di tecniche analitiche mirate indispensabili per conseguire gli obiettivi sopra riportati. Questa nuova edizione conserva l'impostazione generale della precedente ma si arricchisce di due nuovi capitoli. Il primo si propone di approfondire le linee guida utili per la scelta e l'applicazione corretta di metodi analitici per il controllo di materie prime medicinali e loro formulazioni; il secondo affronta le problematiche dell'analisi dei farmaci biotecnologici, classe di farmaci emergenti che richiede un approccio analitico nuovo e avanzato. Nel suo complesso, il testo intende fornire agli studenti di discipline farmaceutiche un percorso formativo graduale e coerente dove i principi di base si integrano con gli aspetti applicativi in modo da pervenire ad una visione ordinata e una conoscenza aggiornata delle problematiche da affrontare e delle principali tecniche analitiche impiegate nei moderni laboratori di analisi farmaceutica.
