Evolution 2.0 Perry Marshall, 2015-09-01 In the ongoing debate about evolution science and faith face off But the truth is both sides are right and wrong In one corner Atheists like Richard Dawkins Daniel Dennett and Jerry Coyne They insist evolution happens by blind random accident Their devout adherence to Neo Darwinism omits the latest science glossing over crucial questions and fascinating details In the other corner Intelligent Design advocates like William Dembski Stephen Meyer and Michael Behe Many defy scientific consensus maintaining that evolution is a fraud and rejecting common ancestry outright There is a third way Evolution 2.0 proves that while evolution is not a hoax neither is it random nor accidental Changes are targeted adaptive and aware You ll discover How organisms re engineer their genetic destiny in real time Amazing systems living things use to re design themselves Every cell is armed with machinery for editing its own DNA The five amazing tools organisms use to alter their genetics 70 years of scientific discoveries of which the public has heard virtually nothing Perry Marshall approached evolution with skepticism for religious reasons As an engineer he rejected the concept of organisms randomly evolving But an epiphany that DNA is code much like data in our digital age sparked a 10 year journey of in depth research into more than 70 years of under reported evolutionary science This led to a new understanding of evolution an evolution 2.0 that not only furthers technology and medicine but fuels our sense of wonder at life itself This book will open your eyes and transform your thinking about evolution and God You ll gain a deeper appreciation for our place in the universe You ll see the world around you as you ve never seen it before Evolution 2.0 pinpoints the central mystery of biology offering a multimillion dollar technology prize at naturalcode.org to the first person who can solve it

New Directions for University Museums Brad King, 2023-12-06 *New Directions for University Museums* is intended to help university museum leaders to help them plan strategically in the context of the issues and needs of the 2020s by examining trends affecting them and directions in response to those forces It will lay out a series of potential directions for university museums in the 21st century using examples from the field Although university museums are similar to other museums in their topic areas art natural history archaeology etc they are a unique category that requires special consideration Today university museums are grappling with new forces that are affecting their future University museums still have a dual responsibility to campus and community and they still try to mount exhibitions that are attractive to the communities in which they are embedded But they are rethinking the nature of service to town and gown in response to larger trends around accessibility It is no longer enough to try to attract visitors these museums are becoming much more active and outgoing in their outreach to the broader public They have unparalleled access to academic firepower but university museum research is no longer the sole province of academics intended for publication in scholarly journals In the 2020s research is being made much more relevant to existential problems of the world For example some are bridging the gap between academic research and teaching and the most pressing social issues of our time such as climate change the fight against racism and the interface between humans and technology University museum research is no longer cloistered and these institutions are finding ways to better leverage the new knowledge yielded by collections based research for both the university s and for public benefit Student engagement and education is still important but communication is no longer unidirectional from faculty and museum staff to students Now student input and co curation is now invited as learning becomes a two way street Moreover public science communication has become a much more important role for university museums These are in effect the new directions to which the title refers The main thesis of the book is therefore that university museums are becoming much more outward facing They are engaging with the public and with the world at large as never before In effect they matter more than ever This is the overarching new direction Within this general approach there are a number of questions that the book addresses What are the expectations of university museums in the 21st century from their key stakeholders university administrations faculties and students and the communities in which they are

embedded How are those expectations changing and how are the museums evolving to meet them How are university museums navigating the minefields of political polarization cancel culture or heightened activism on campus and in society at large What is the nature of the relationship between the university's research and teaching mission and the university museum What trends can we identify and how can we help the university museum director navigate those trends The university donor relationship what can we learn from a study of donor expectations and the dynamics of university donor relationships in contemporary society How is the relationship between the university museum and the broader external community changing How is the university museum contributing to or detracting from the overall relationship between the university and the community What role is the university museum playing in terms of public communication of research especially public science communication This book is for all those who work in benefit from or are interested in university museums In particular it is hoped that the book will help university museum leaders who are embarking on strategic plans understand the common issues that are currently affecting their peers and provide some context and guidance to those leaders as they chart their own paths for the future and to advance larger goals For faculty it will show how the museum can help improve undergraduate teaching and graduate student training via highlights and illustrations of new ways in which faculty departments are cooperating and partnering with their campus museums and from a university administration point of view how the museum can help the university achieve its bigger strategic goals such as helping increase the percentage of successful faculty grant applications

heat equation with the crank nicolson method on matlab - Jun 13 2023

web mar 10 2022 i am trying to implement the crank nicolson method in matlab of this equation $du/dt = d^2u/dx^2$ $f(x,t)$ $u(0,t) = 0$ $u(1,t) = 0$ $u(x,0) = u_0(x)$ with $f(x,t) = 20 \exp(50x) \cdot 1/2^2$ if $t \leq 1/2$ also $f(x,t) = 0$ $x \in [0,1]$ the boundary conditions are $u(0,x) = 0$ $u(1,x) = 1$ here is my mathematical thinking of the form $a \cdot u(n) + b \cdot u(n+1) + c \cdot u(n+2) = f_n$
