Governance Indicators Helmut K. Anheier, Matthias Haber, Mark A. Kayser, 2018-10-25 As difficult as it might seem to define governance it appears to be that much more difficult to measure it. Since the World Bank Institute launched the Worldwide Governance Indicators in the late 1990s the governance indicators field has flourished and experienced significant advances in terms of methodology, data coverage and quality and policy relevance. Other major initiatives have added to a momentum that propelled research on governance indicators seen in few other academic fields in the economic and social sciences. Given these developments and the prominence and policy relevance the field of governance indicator research has achieved the time is ripe to take stock and ask what has been accomplished, what the shortcomings and potentials might be and what steps present themselves as a way forward. This volume, the fifth edition in an annual series tackling different aspects of governance around the world, assesses what has been achieved, identifies strengths and weaknesses of current work and points to issues that need to be tackled in order to advance the field both in its academic importance as well as in its policy relevance. In short, the contributions to this volume explore the scope of existing governance indices and indicator frameworks, elaborate on current challenges in measuring and analysing governance and consider how to overcome them.

Capability Building and Global Innovation Networks Michael Gastrow, Glenda Kruss, 2017-10-02 This book explores the dynamics of global innovation networks and their implications for development. Knowledge is often seen as the main determinant of economic growth, competitiveness and employment. There is a strong causal interaction between capability building and the growth in demand for and supply of technical and organizational innovation. This complex of skills, knowledge and innovation holds great potential benefit for development, particularly in the context of developing countries. However, despite evidence of the increasing importance of knowledge and innovation, there has been relatively little research to understand the distribution and coordination of innovation and knowledge intensive economic activities on a global scale and what this might mean for economic development. Each chapter, though sharing an underlying conception of innovation systems, innovation networks and their relation to capability building and development, takes a different theoretical stance. The authors explore the emerging relationship between competence building and the structure of global innovation networks, thus providing a valuable new perspective from which to critically assess their development potential. This book was originally published as a special issue of *Innovation and Development*.
