Business Intelligence for the Real-Time Enterprise Malu Castellanos,Umeshwar Dayal,Timos Sellis,2009-08-03 In today s competitive and highly dynamic environment analyzing data to understand how the business is performing to predict outcomes and

trends and to improve the effectiveness of business processes underlying business operations has become critical. The traditional approach to reporting is no longer adequate; users now demand easy to use intelligent platforms and applications capable of analyzing real time business data to provide insight and actionable information at the right time. The end goal is to improve the enterprise performance by better and timelier decision making enabled by the availability of up to date high quality information. As a response the notion of real time enterprise has emerged and is beginning to be recognized in the industry. Gartner defines it as using up to date information getting rid of delays and using speed for competitive advantage is what the real time enterprise is all about. Indeed the goal of the real time enterprise is to act on events as they happen. Although there has been progress in this direction and many companies are introducing products toward making this vision a reality there is still a long way to go. In particular the whole lifecycle of business intelligence requires new techniques and methodologies capable of dealing with the new requirements imposed by the real time enterprise.
