

GOAL 1: Using Midsegments of a Triangle

In Lessons 5.2 and 5.3, you studied four special types of segments of a triangle: perpendicular bisectors, angle bisectors, medians, and altitudes. Another special type of segment is called a midsegment. A midsegment of a triangle is a segment that connects the midpoints of two sides of a triangle.

You can form the three midsegments of a triangle by tracing the triangle on paper, cutting it out, and folding it, as shown below.

1 Fold one vertex onto another to find one midpoint.

2 Repeat the process to find the other two midpoints.

3 Fold a segment that contains two of the midpoints.

4 Fold the remaining two midsegments of the triangle.
