Multiple Stars across the H-R Diagram Swetlana Hubrig,Monika Petr-Gotzens,Andrei Tokovinin,2007-10-13 The ESO workshop Multiple Stars across the H R Diagram was held in Garching on 12 15 July 2005 The topics included observations of multiple stars from ground and space dynamical and stellar evolution in multiple systems e ffects of the environment on multiplicity formation and early e volution of multiple stars and special components of multiple stars chemically peculiar stars blue stragglers brown dwarfs etc Stars show a marked tendency to be in systems of di fferent multiplicity 7 ranging from simple binaries and triples to globular clusters with N 10 Modern observations give a frequency of binary and multiple stars in the Galactic eld of up to 70% and between 5% and 20% of these systems are at least triple There is evidence that the degree of multiplicity increases with primary mass Many known multiple systems are too wide to have s nificant physical interaction between their components However tidal and N body dynamical interactions are important even in relatively wide s tems and probably lead to the shrinkage of inner orbits This sets the stage for spectacular evolutionary processes such as Roche lobe over ow me ers

supernovae formation of special components etc Only recently did we realize that some of these processes require at least three stars The formation of multiple systems remains a difficult and challenging part of astrophysics although it has been addressed at the Workshop only briefly
