Aristotle's Ladder, Darwin's Tree J. David. Archibald, 2014-07-15 Leading paleontologist David Archibald explores the rich history of visual metaphors for biological order from ancient times to the present and their influence on human beings perception of their place in nature Specifically Archibald focuses on ladders and trees and the first appearance of trees to represent seasonal life cycles Their use in ancient Roman decorations and genealogies was then appropriated by the early Christian Church to represent biblical genealogies The late eighteenth century saw the idea of a tree reappropriated to visualize relationships in the natural world sometimes with a creationist view but in some instances suggesting evolution Charles Darwin s On the Origin of Species 1859 exorcised the exclusively creationist view of the tree of life His ideas sparked an explosion of trees mostly by younger acolytes in Europe Although Darwin s influence waned in the early twentieth century by midcentury his ideas held sway once again in time for another and even greater explosion of tree building generated by the development of new theories on how to assemble trees the birth of powerful computing and the emergence of molecular technology Throughout his far reaching study and with the use of many figures Archibald connects the evolution of tree of life iconography to our changing perception of the world and ourselves offering uncommon insight into how we went from standing on the top rung of the biological ladder to embodying just one tiny twig on the tree of life
