Focus on Protein Research John W. Robinson, 2004 Protein research is a frontier field in science. Proteins are widely distributed in plants and animals and are the principal constituents of the protoplasm of all cells and consist essentially of combinations of amino acids in peptide linkages. Twenty different amino acids are commonly found in proteins and serve as enzymes, structural elements, hormones, immunoglobulins, etc., and are involved throughout the body and in photosynthesis. This new book gathers new leading edge research from throughout the world in this exciting and exploding field of research.

Yet more than a decade after emerging as an autonomous entity with its own capacity for civilian crisis management and military action, the European Union's CSDP is still very much a work in progress. This fully revised and updated new edition provides the most comprehensive account available of the CSDP and the debates surrounding it. Written by a leading authority in the field, the second edition draws on the author's own extensive research in the area, including hundreds of interviews with key actors, and takes account of developments since the reforms of the Lisbon Treaty. A brand new chapter assesses international relations theory and European integration theory as tools to understand the CSDP and critically engages with theoretical approaches that view security and defence policy as the exclusive domain of sovereign nation states. The book concludes with an analysis of future hurdles for the European Union as it responds to new and often unpredictable crises across the globe. *The Age of Electroacoustics* Roland Wittje, 2025-02-18 The transformation of acoustics into electro acoustics, a field at the intersection of science and technology, guided by

electrical engineering industry and the military At the end of the nineteenth century acoustics was a science of musical sounds the musically trained ear was the ultimate reference Just a few decades into the twentieth century acoustics had undergone a transformation from a scientific field based on the understanding of classical music to one guided by electrical engineering with industrial and military applications In this book Roland Wittje traces this transition from the late nineteenth century work of Hermann Helmholtz to the militarized research of World War I and media technology in the 1930s Wittje shows that physics in the early twentieth century was not only about relativity and atomic structure but encompassed a range of experimental applied and industrial research fields The emergence of technical acoustics and electroacoustics illustrates a scientific field at the intersection of science and technology Wittje starts with Helmholtz's and Rayleigh's work and its intersection with telegraphy and early wireless and continues with the industrialization of acoustics during World War I when sound measurement was automated and electrical engineering and radio took over the concept of noise Researchers no longer appealed to the musically trained ear to understand sound but to the thinking and practices of electrical engineering Finally Wittje covers the demilitarization of acoustics during the Weimar Republic and its remilitarization at the beginning of the Third Reich He shows how technical acoustics fit well with the Nazi dismissal of pure science representing everything that German Physics under National Socialism should be experimental applied and relevant to the military

Structure-Related Intrinsic Electrical States and Firing Patterns of Neurons With Active Dendrites

Sergey M. Korogod, 2018-10-18 Activity of the multi functional networked neurons depends on their intrinsic states and bears both cell and network defined features Firing patterns of a neuron are conventionally attributed to spatial temporal organization of inputs received from the network mates via synapses in vast majority dendritic This attribution reflects widespread views of the within cell job sharing such that the main function of the dendrites is to receive signals and deliver them to the axo somatic trigger zone which actually generates the output pattern However these views are now revisited due to finding of active non linear properties of the dendritic membrane practically in neurons of practically all explored types Like soma and axon the dendrites with active membrane are able to generate self maintained propagating depolarizations and thus share intrinsic pattern forming role with the trigger zone Unlike the trigger zone the dendrites have complex geometry which is subject to developmental activity dependent or neurodegenerative changes Structural features of the

arborization inevitably impact on electrical states and cooperative behavior of its constituting parts at different levels of organization from sub trees and branches to voltage and ligand gated ion channels populating the dendritic membrane More than two decades of experimental and computer simulation studies have brought numerous phenomenological demonstrations of influence of the dendritic structure on neuronal firing patterns A necessary step forward is to comprehend these findings and build a firm theoretical basis including quantitative relationships between geometrical and electrical characteristics determining intrinsic activity of neurons The articles in this eBook represent progress achieved in a broad circle of laboratories studied various aspects of structure and function of the neuronal dendrites The authors elucidate new details of dendritic mechanisms underlying intrinsic activity patterns in neurons and highlight important questions that remain open in this important domain of cellular and computational neuroscience

does a conference on Object Oriented Programming really mean I honestly don't know What I do know is that since its creation in 1987 ECOOP has been attracting a large number of contributions and ECOOP conferences have ended up with high quality technical programs featuring interesting mixtures of theory and practice Among the 183 initial submissions to ECOOP 99 20 papers were selected for inclusion in the technical program of the conference Every paper was reviewed by three to five referees The selection of papers was carried out during a 4 day program committee meeting at the Swiss Federal Institute of Technology in Lausanne Papers were judged according to their originality presentation quality and relevance to the conference topics
