 presents an introductory survey of the basic concepts and applied mathematical methods of nonlinear science as well as an
 introduction to some simple related nonlinear experimental activities Students in engineering physics chemistry
 mathematics computing science and biology should be able to successfully use this book In an effort to provide the reader
 with a cutting edge approach to one of the most dynamic often subtle complex and still rapidly evolving areas of modern
 research nonlinear physics we have made extensive use of the symbolic numeric and plotting capabilities of the Maple
 software system applied to examples from these disciplines No prior knowledge of Maple or computer programming is
 assumed the reader being gently introduced to Maple as an auxiliary tool as the concepts of nonlinear science are developed
 The CD ROM provided with this book gives a wide variety of illustrative nonlinear examples solved with Maple In addition
 numerous annotated examples are sprinkled throughout the text and also placed on the CD An accompanying set of
 experimental activities keyed to the theory developed in Part I of the book is given in Part II These activities allow the
 student the option of hands on experience in exploring nonlinear phenomena in the REAL world Although the experiments
 are easy to perform they give rise to experimental and theoretical complexities which are not to be underestimated **Road**
