Spontaneous Spoken Language J. E. Miller, Regina Weinert, 1998 Jim Miller and Regina Weinert investigate syntactic structure and the organization of discourse in spontaneous spoken language Using data

from English German and Russian they develop a systematic analysis of spoken English and highlight properties that hold across languages The authors argue that the differences in syntax and the construction of discourse between spontaneous speech and written language bear on various areas of linguistic theory apart from having obvious implications for syntactic analysis In particular they bear on typology Chomskyan theories of first language acquisition and the perennial problem of language in education In current typological practice written and spontaneous spoken texts are often compared the authors show convincingly that typological research should compare like with like The consequences for Chomskyan and indeed all theories of first language acquisition flow from the central fact that children acquire spoken language but learn written language
