Research in Education, 1974      *Resources in Education*, 1999-10      **Multiple Methods of Teaching Mathematics in the Elementary School** Charles H. D'Augustine, 1984      **Designing Learning Environments for Developing Understanding of Geometry and Space** Richard Lehrer, Daniel Chazan, 2012-11-12 This volume reflects an appreciation of the interactive roles of subject matter teacher student and technologies in designing classrooms that promote understanding of geometry and space Although these elements of geometry education are mutually constituted the book is organized to highlight first the editors vision of a general geometry education second the development of student thinking in everyday and classroom contexts and third the role of technologies Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K 12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure dimension and form Further the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks This volume is essential reading for those involved in mathematics education at all levels including university faculty researchers and graduate students      *Second Handbook of Research on Mathematics Teaching and Learning* Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community      **Exploring the Math and Art Connection** Daniel Jarvis, Irene Naested, 2012 Daniel Jarvis and Irene Naested highlight the natural association between math and art in a series of practical ideas for the classroom because when students understand the math art connection their understanding and confidence increase in both

subjects Through innovative teaching strategies and more than 100 rich learning experiences Jarvis and Naested give teachers a wealth of engaging tools to explore the math art connection with their own students This connection is established through examinations of natural and human designed objects from how pine cone scales spiral out in a Fibonacci sequence to how geometric shapes combine in architecture to form some of the most beautiful structures on the planet [Encyclopedia of Mathematics Education](#) Louise Grinstein, Sally I. Lipsey, 2001-03-15 This single volume reference is designed for readers and researchers investigating national and international aspects of mathematics education at the elementary secondary and post secondary levels It contains more than 400 entries arranged alphabetically by headings of greatest pertinence to mathematics education The scope is comprehensive encompassing all major areas of mathematics education including assessment content and instructional procedures curriculum enrichment international comparisons and psychology of learning and instruction

**Lines That Connect** Graeme Were, 2010-08-31 Building on historical and contemporary literature in anthropology and art theory Lines That Connect treats pattern as a material form of thought that provokes connections between disparate things through processes of resemblance memory and transformation Pattern is constantly in a state of motion as it traverses spatial and temporal divides and acts as an endless source for innovation through its inherent transformability Graeme Were argues that it is the ideas carried by pattern s relational capacity that allows Pacific islanders to express their links to land genealogy and resources in the most economic ways In doing so his book is a timely and unique contribution to the analysis of pattern and decorative art in the Pacific amid growing debates in anthropology and art history This striking and original study brings together objects and photographs historical literature and contemporary ethnographic case studies to explore pattern in its logical workings It presents the first ever analysis of the well known patterned shell valuable called kapkap as revealed in New Ireland mortuary feasts Innovative research in the study of Christianity and the Baha i faithful in the region shows how pattern has been appropriated in new religious communities Were argues that pattern is used in various guises in performances church architecture and funerary images to contrasting effect He explores the conditions under which pattern facilitates a connecting of old and new ideas and how missionary processes are implicated in this flow He then considers the mechanisms under which pattern is internalized paying particular attention to its embeddedness in spatial and numerical thinking Finally he examines how pattern carries new materials and technologies which in turn provide new resources for sustaining old beliefs Drawing on a multitude of fields anthropology art history Pacific museum and religious studies education ethnomathematics Lines That Connect raises key questions about the capacity of pattern across the Pacific to bind and sustain ideas about place body and genealogy in the most logical of ways

**Learning Together** David Tyack, Elizabeth Hansot, 1992-12-03 Now available in paperback this award winning book provides a comprehensive history of gender policies and practices in American public schools David Tyack and Elisabeth Hansot explore the many factors that have shaped coeducation since its origins At the very time that Americans were

creating separate spheres for adult men and women they institutionalized an education system that brought boys and girls together How did beliefs about the similarities and differences of boys and girls shape policy and practice in schools To what degree did the treatment of boys and girls differ by class race region and historical period Debates over gender policies suggest that American have made public education the repository of their hopes and anxieties about relationships between the sexes Thus the history of coeducation serves as a window not only on constancy and change in gender practices in the schools but also on cultural conflicts about gender in the broader society Learning Together presents a rich and exhaustive search through the tangled history of gender and education that links both the silences and the debates surrounding coeducation to the changing roles of women and men in our society It is the generosity and capaciousness of Tyack and Hansot s scholarship that makes Learning Together so important a book Science      **Educational Research Record** ,1928
