**Equipment — Boom Levelling 2****Operation of Boom Levelling**

The boom levelling system is electro-hydraulically operated. The sensor (B16) located on the boom valve gives position information for the automation of the boom levelling.

The levelling system levels the boom on the off-road driving.

The function switches on when the work brake disengages. When the work brake is engaged the boom levelling is disengaged after it has finished the levelling work.

While the boom is manually controlled and the work brake is not engaged, the boom levelling system levels the boom after manual controlling is finished.

If the work brake is engaged and the boom is manually controlled, the boom levelling system activates after the work brake disengages.
