

Chapter 8 Population Issues: Who We Study Matters!

Chapter Overview

Researchers investigate the impact of selecting participants and generalizing the results based on the selected group (or groups) of individuals. This chapter focuses on the issues of which population best represents the target and importance of research concerning that population. Issues are highlighted regarding the selection process of participants in our research areas (participants' needs, etc.) that present different types of participants (the target population) with their own characteristics and generalities.

Selecting participants in a study typically involves selecting samples from a population. However, the difficulty lies in selecting samples from a population in which sampling bias may occur. In research that uses general issues for selecting participants (including not defining the target population, determining a participant pool, and selecting participants), the knowledge the ability to extend to the degree of generalization and generalizability of participants are different. Finally, the characteristics of generalizability and population diversity involving general issues involving generalizability participants issues are listed and presented.

Essential Chapter Outline

1. Sampling Issues

Selecting participants in a study typically involves selecting samples from a population. However, sampling bias occurs. The foundation for understanding the process and the implications of selecting participants for research study. The issues of sampling bias involve selecting participants using target general populations (Figure 8.1). The important aspect of generalization, whether it is of people or organizations, is that a researcher should know the research sample-based system (the population) of interest, including identifying individuals with a limited number of participants, the degree to which particular participants show similarity in generalizability (the degree of their characteristics or generalizability) and the ability to generalize to other target populations. That is, researchers who study about the population based on a small number of individuals.

Researchers often generalize on the basis of samples selected from populations.

Pharmacokinetic Principles of Dosing Adjustments Ronald D. Schoenwald, 2023-01-27 This book has evolved over the last twenty years from a cumulative effort to develop a professional course in pharmacokinetics that would assist future practitioners in therapeutic decision making As practicing

pharmacists become more involved with patient advising it becomes apparent that clinicians will be required to make dosing adjustments for certain drugs This will become increasingly more likely as pharmacy practitioners have access to patient information that requires careful attention to dose and dosing interval which in turn correlates to various pharmacokinetic parameters such as half life and the volume of distribution of drugs Although many handbooks are available on this subject they do not devote more than a brief chapter to the concepts behind the dosing adjustment approach Pharmacokinetic Principles of Dosing Adjustments provides the concepts used to formulate approaches Equations that appear in various chapters are developed not through lengthy derivations but by more of an intuitive approach The equations are presented in their conceptual form rather than a separate convenient form applicable to each clinic situation This method is used to demonstrate how you can apply the initial conditions to the properties of the drug patient and or route of administration rather than memorizing each variation of the basic equation The author defines pertinent pharmacokinetic terms as well as kinetic processes and classical modeling relevant to dosing adjustments Examples are included within each chapter that emphasize an understanding of the concepts Pharmacokinetic Principles of Dosing Adjustments was written for practitioners who operate in a setting that requires careful consideration to dosing parameters and in particular with patients that require constant monitoring of therapeutic outcomes including dosing adjustments Based on the introductory course in pharmacokinetics taught by Dr Schoenwald for the past twenty years this book is intended as a review and resource for practicing pharmacists
