Understanding Context Environment Language And Information Architecture:

Understanding Context Andrew Hinton, 2014-07-31 Provides information for digital designers about context in digital environments including how labels relationships and rules work as building blocks for context and models for discerning the contextual angles of the user experience

Understanding Context Andrew Hinton, 2014-12-02 To make sense of the world we're always trying to place things in context whether our environment is physical cultural or something else altogether Now that we live among digital always networked products apps and places context is more complicated than ever starting with where and who we are This practical insightful book provides a powerful toolset to help information architects UX professionals and web and app designers understand and solve the many challenges of contextual ambiguity in the products and services they create You'll discover not only how to design for a given context but also how design participates in making context Learn how people perceive context when touching and navigating digital environments See how labels relationships and rules work as building blocks for context Find out how to make better sense of cross channel multi device products or services Discover how language creates infrastructure in organizations software and the Internet of Things Learn models for figuring out the contextual angles of any user experience

Exploring Context in Information Behavior Naresh Kumar

Agarwal, 2022-05-31 The field of human information behavior runs the gamut of processes from the realization of a need or gap in understanding to the search for information from one or more sources to fill that gap to the use of that information to complete a task at hand or to satisfy a curiosity as well as other behaviors such as avoiding information or finding information serendipitously Designers of mechanisms tools and computer based systems to facilitate this seeking and search process often lack a full knowledge of the context surrounding the search This context may vary depending on the job or role of the person individual characteristics such as personality domain knowledge age gender perception of self etc the task at hand the source and the channel and their degree of accessibility and usability and the relationship that the seeker shares

with the source Yet researchers have yet to agree on what context really means While there have been various research studies incorporating context and biennial conferences on context in information behavior there lacks a clear definition of what context is what its boundaries are and what elements and variables comprise context In this book we look at the many definitions of and the theoretical and empirical studies on context and I attempt to map the conceptual space of context in information behavior I propose theoretical frameworks to map the boundaries elements and variables of context I then discuss how to incorporate these frameworks and variables in the design of research studies on context We then arrive at a unified definition of context This book should provide designers of search systems a better understanding of context as they seek to meet the needs and demands of information seekers It will be an important resource for researchers in Library and Information Science especially doctoral students looking for one resource that covers an exhaustive range of the most current literature related to context the best selection of classics and a synthesis of these into theoretical frameworks and a unified definition The book should help to move forward research in the field by clarifying the elements variables and views that are pertinent In particular the list of elements to be considered and the variables associated with each element will be extremely useful to researchers wanting to include the influences of context in their studies
