The popular scientist explains the marvels and mysteries of evolution in this fun-to-read and easy-to-absorb New York Times bestseller. The Washington Post: Evolution is one of the most powerful and important ideas ever developed in the history of science. Every question it raises leads to new answers, new discoveries, and new smarter questions. The science of evolution is as expansive as nature itself. It is also the most meaningful creation story that humans have ever found. Bill Nye Sparked by a controversial debate in February 2014, Bill Nye has set off on an energetic campaign to spread awareness of evolution and the powerful way it shapes our lives. In *Undeniable: Evolution and the Science of Creation*, he explains why race does not really exist, evaluates the true promise and peril of genetically modified food, reveals how new species are born in a dog kennel and in a London subway, takes a stroll through 4.5 billion years of time, and explores the new search for alien life, including aliens right here on Earth. With infectious enthusiasm, Bill Nye shows that evolution is much more than a rebuttal to creationism; it is an essential way to understand how nature works and to change the world. It might also help you get a date on a Saturday night. Mr. Nye writes briskly and accessibly and makes an eloquent case for evolution. The Wall Street Journal: Nye, known for delivering geeky intel with clarity and charm, takes on one of society's most hotly debated topics: yes, still. *Time Out New York*: *Bill Nye the Science Guy's Consider the Following*. Bill Nye, 1996. Answer your questions and see how to prove each answer through simple but fascinating experiments. Science V. Story. Emma Frances Bloomfield, 2024-02-27. Uncovering common threads across types of science skepticism to show why these controversial narratives stick and how we can more effectively counter them through storytelling. *Science v Story* analyzes four scientific controversies: climate change, evolution, vaccination, and COVID-19 through the lens of storytelling. Instead of viewing stories as adversaries to scientific practices, Emma Frances Bloomfield demonstrates how storytelling is integral to science communication. Drawing from narrative theory and rhetorical studies, *Science v Story* examines scientific stories and rival stories, including disingenuous rival stories that undermine scientific conclusions and productive rival stories that work to make science more inclusive. *Science v Story* offers two tools to evaluate and build stories: narrative webs and narrative constellations. These visual mapping tools chart the features of a story: i.e., characters, action, sequence, scope, storyteller, and

content to locate opportunities for audience engagement Bloomfield ultimately argues that we can strengthen science communication by incorporating storytelling in critical ways that are attentive to audience and context Creation Vs Evolution Selva Sugunendran,2015-09-18 In this book you will learn about the origins of life which has been a popular topic of debate for decades stirring division among groups of people regarding what to believe whether a higher entity created life the Creation or a series of cosmic accidents Evolution led to life developing on Earth In this book Ill try to find the seemingly elusive answers to the questions involving our very origins Where do we come from Who or what made us a supreme being some cosmic event or both What should we believe in the Creation or Evolution Does it matter what we choose to believe I have attempted to look at both sides of the argument the Creation and Evolution fairly and scientifically without taking sides
