Test, Measure, Punish Erin Michaels, 2025-06-24 The risk of closure and repression in schools In the last two decades education officials have closed a rising number of public schools nationwide related to low

performance These schools are mainly located in neglected neighborhoods with high concentrations of poverty Despite this credible threat of closure relatively few individual schools threatened with closure for low performance in the United States are actually shut down Yet as Erin Michaels argues the looming threat is ever present Test Measure Punish critically shifts the focus from school shutdowns to the more typical situation within these strained public schools operating under persistent risk of closure Many K 12 schools today face escalating sanctions if they do not improve according to repressive state mandates which in turn incentivize schools to put into place nonstop test drills and strict student conduct rules Test Measure Punish traces how threats of school closure have distorted education to become more punitive which disproportionately impacts even targets Black and Latinx communities and substantially hurts student social development This book addresses how these new punitive schooling conditions for troubled schools reproduce racial inequalities Michaels centers her research in a suburban upstate New York high school serving mainly working class Black and Latinx students She reveals a new model of schooling based on testing and security regimes that expands the carceral state making the students feel dejected criminalized and suspicious of the system their peers and themselves Test Measure Punish offers a new theory of schooling inequality and shows in vivid detail why state led school reforms represent a new level of racialized citizenship in an already fragmented public education system

Darwinian Populations and

Natural Selection Peter Godfrey-Smith, 2009-03-26 In 1859 Darwin described a deceptively simple mechanism that he called natural selection a combination of variation inheritance and reproductive success He argued that this mechanism was the key to explaining the most puzzling features of the natural world and science and philosophy were changed forever as a

result The exact nature of the Darwinian process has been controversial ever since however Godfrey Smith draws on new developments in biology philosophy of science and other fields to give a new analysis and extension of Darwin's idea The central concept used is that of a Darwinian population a collection of things with the capacity to undergo change by natural selection From this starting point new analyses of the role of genes in evolution the application of Darwinian ideas to cultural change and evolutionary transitions that produce complex organisms and societies are developed Darwinian Populations and Natural Selection will be essential reading for anyone interested in evolutionary theory *Population Ecology in Practice* Dennis L. Complex Systems and Population Health Yorghos Apostolopoulos, Kristen Hassmiller Lich, Michael K. Lemke, 2020-05-29 Currently population health science is an integral part of global academic curricula For over a century the principles of the reductionist paradigm have guided population health curricula training research and action Researchers continue to draw upon these principles when theorizing conceptualizing designing studies analyzing and devising interventions to tackle complex population health problems However unresolved impasses in addressing pressing population health challenges have catalyzed calls for the integration of complex systems science grounded approaches into population health science Mounting evidence denotes that a complex systems paradigm can bring about dramatic multipronged changes for education and training and lead to innovative research interventions and policies Despite the large and untapped promise of complex systems the haphazard knowledge base from which academics researchers students policymakers and practitioners can draw has slowed their integration into the population health sciences This volume fulfills this growing need by providing the knowledge base necessary to introduce a holistic complex systems paradigm in population health science As such it is the first comprehensive book in population health science that meaningfully integrates complex systems theory methodology modeling computational simulation and real world applications while incorporating current population health theoretical methodological and analytical perspectives It is intended as a programmatic primer across a broad spectrum of population health stakeholders from university professors and graduate students to researchers policymakers and practitioners

Understanding Origins Francisco J. Varela,J.P. Dupuy,2013-03-09 The main intention of this book is to bring together contributions from biology cognitive science and the humanities for a joint exploration of some of the main contemporary notions dealing with the understanding of origins in life mind and society The question of origin is inseparable from a web of hypotheses that both shape and explain us Although origin invites examination it always seems to elude our grasp Notions have always been produced to interpret the genesis of life mind and the social order and these notions have all remained unstable in the face of theoretical and empirical challenges In any given period the central ideas on origin have had a mutual resonance frequently overlooked by specialists engaged in their own particular fields As a consequence this book should be of interest to a wide audience In particular for all those engaged in the social sciences and the philosophy of science it is unique document since bridges to the natural sciences in a mutually illuminating way are hard to find Whether as a primary source or as inspirational reading we feel this book has a place in every library The material comes from an international meeting held in September 13 16 1987 at Stanford University organized by F Varela and J P Dupuy at the request of the Program of Interdisciplinary Research of Stanford University We are grateful to Rene Girard the Program
