Andrew Packer, 2016-11-18 Measurement of buildings is the core skill of the quantity surveyor. It underpins the procurement management, delivery and subsequent commissioning of a completed building and must now be completed using New Rules of Measurement 2 NRM 2. In this much needed new measurement textbook, the measurement of the most common building elements is described using NRM2. Extensive worked examples including fully up to date hand drawn diagrams and supporting take off lists ensure that the reader develops a confidence in their ability to measure using NRM2 in practice. A practical step by step approach is used to explain and interpret the detail of the specific Work Sections of NRM2 covering a broad range of different trades including mechanical and electrical systems, external works, groundwork, masonry, joinery and internal finishes. Presuming no prior knowledge of measurement or NRM2 and fully up to date with current practice including consideration of Building Information Modelling, this is the ideal text for students of measurement at HND or BSc level as well as practitioners needing a crash course in how to apply NRM2.

Introduction to Estimating, Plan Reading and Construction Techniques Gary Anglin, 2019-11-05 To understand Construction Estimating, one must also understand plan reading and construction techniques. This book is designed to teach the construction student these three core skills in equal measure. Using hundreds of plans, sketches and photos, the book builds case studies of the major construction divisions including concrete, masonry, carpentry and more. Over forty cases are divided into sections following a specially designed format: Plans, Scale drawings of floor plans, sections or elevations, Plan Interpretation. The drawings are explained with comments, Scope of the Work. A written description of the boundaries of the work is given for each section, Construction Techniques. The construction processes and their sequence are explained, The Takeoff. A takeoff is shown at the end of each section. This approach helps foster confidence in plan reading, building methods, arithmetic takeoffs and estimates. The various products and terms used in the industries of structural steel, doors and hardware and roofing are defined. The shop drawing process is explained, which is so important in many industries as well as the role of and difference between manufacturers, fabricators and suppliers, distributors. The book ends with a study of front end documents including Division 00 General Conditions, AIA 201 and Division 01 General Requirements and a chapter on Ethics. This textbook can be used to teach a variety of classes including plan reading, construction techniques and estimating 1 and 2 takeoffs and pricing.
