SUB-THEME 1: INTERACTION OF MATTER, SPACE AND TIME

WEEK	TOPIC	PERFORMANCE OBJECTIVES	CONTENT	ACTIVITIES		TEACHING AND LEARNING RESOURCES	EVALUATION GUIDE
				TEACHER	STUDENTS		
1	Fundamentals and derived quantities and units	Students should be able to: (1) define fundamental and derived quantities. (2) distinguish between fundamental and derived quantities. (3) distinguish between fundamental and derived units.	(1) Fundamental quantities: mass, length, time, current, temperature, energy etc. (2) Fundamental units: Kg, M, S, K, A etc. (3) Derived quantities: force, speed, volume, area etc. (4) Derived units: Mu^{-1} , M^2 , M^3 etc.	(1) Leads discussion on standard units of measurement. (2) Displays these measuring instruments. (3) Demonstrates the measurement of the fundamental quantities.	(1) Give examples of derived quantities and units. (2) Should identify these measuring instruments. (3) Should measure length, mass of objects in their environment.	(1) Metre rule (2) Tape (3) Spring balance (4) Chemical balance. (5) Vernier calipers.	Students to: (1) distinguish fundamental quantities for derived quantities. (2) identify and how to use the measuring instrument.
2	Position distance and displacement	Students should be able to: distinguish between distance, and displacement in a translational motion.	(1) Concept of position, distance and time. (2) Concept of displacement. (3) Measurement of distance and displacement. (4) Distinction between distance and displacement.	Demonstrates how to use a size metre string to measure length of the field, classroom block, students table and chair.	Use the metric rule to measure the length and breadth of the classroom etc.	(1) Metre rule (2) Tape (3) A pair of compasses string and protractor.	Students to: (1) use different measuring instruments to measure. (2) identify a body in motion or at rest relative to reference point.
3	Time	Students should be able to: (1) define time. (2) list various instrument for measuring time. (3) construct a clock for measuring time interval for simple system that has a repetitive motion.	(1) Concept of time. (2) Ways of measuring time. (3) Units of time and conversion.	(1) Leads discussion in the use of repetitive events to define day and night, season and festivals. (2) Displays some measuring instrument.	(1) Practice the use of: -Heat beat -Sand clock -Pendulum -Stop clock/watch (2) Discuss the use of repetitive events to define day and night, seasons and festival.	(1) Sand-clock (2) Funnel-sand, beaker and retort stand, water clock, burette, water pendulum bob, string stop clock/watch ticker-time and tape.	Students to: (1) Use different types of measuring instruments to measure time correctly. (2) To solve numerical problems: how many sec in: A day, weeks, years etc.

Municipal World ,1901 **Coordination and Optimization of Grid-Tied Power Converters** Feng Gao,Tao

Xu,2021-12-01 This book investigates the control and optimization of grid tied power converters with a special attention attached to pulse width modulation which determines the size and cost of power converters as well as switching harmonics Through the methods introduced in this book multiple grid tied power converters safely operate and coordinate in a highly efficient and reliable fashion thereby boosting the operation of modern power grids To facilitate understanding the key methods are presented together with their associated algorithms and detailed software codes In parallel to theoretical treatments this book further applies the methods into practical scenarios and industrial products thus enhancing their credibility The book serves as a guidance for electrical engineers and researchers in the field of power electronics and power systems *Acta Physica Polonica* ,2007 Workmen's Compensation and Insurance Reports William Edward

Wang,2018-03-30 The 2nd International Conference on Computer Science and Mechanical Automation carried on the success from last year and received overwhelming support from the research community as evidenced by the number of high quality submissions The conference accepted articles through rigorous peer review process We are grateful to the contributions of all the authors For those who have papers appear in this collection we thank you for your great effort that makes this conference a success and the volume of this proceeding worth reading For those whose papers were not accepted we assure you that your support is very much appreciated The papers in this proceeding represent a broad spectrum of research topics and reveal some cutting edge developments Chapter 1 and 2 contain articles in the areas of computer science and information technology The articles in Chapter 1 focus on algorithm and system development in big data data mining machine learning cloud computing security robotics Internet of Things and computer science education The articles in Chapter 2 cover image processing speech recognition sound event recognition music classification collaborative learning e government as well as a variety of emerging new areas of applications Some of these papers are especially eye opening and worth reading Chapter 3 and 4 contain papers in the areas of sensors instrument and measurement The articles in Chapter 3 cover mostly navigation systems unmanned air vehicles satellites geographic information systems and all kinds of sensors that are related to location position and other geographic information The articles in Chapter 4 are about sensors and instruments that are used in areas like temperature and humidity monitoring medical instruments biometric sensors and

other sensors for security applications Some of these papers are concerned about highly critical systems such as nuclear environmental monitoring and object tracking for satellite videos Chapter 5 and 6 contain papers in the areas of mechatronics and electrical engineering The articles in Chapter 5 cover mostly mechanical design for a variety of equipment such as space release devices box girder shovel loading machines suspension cables grinding and polishing machines gantry milling machines clip type passive manipulator hot runner systems water hydraulic pump motor and turbofan engines The articles in Chapter 6 focus on mechanical and automation devices in power systems as well as automobiles and motorcycles This collection of research papers showcases the incredible accomplishments of the authors In the meantime they once again prove that the International Conference on Computer Science and Mechanical Automation is a highly valuable platform for the research community to share ideas and knowledge Organization of an international conference is a huge endeavor that demands teamwork We very much appreciate everyone who is involved in the organization especially the reviewers We are looking forward to another successful conference next year

Copyright Law and the Public Interest in the

Nineteenth Century Isabella Alexander, 2010-03-03 Copyright law is commonly described as carrying out a balancing act between the interests of authors or owners and those of the public While much academic work both historical and contemporary has been done on the authorship side of the equation this book examines the notion of public interest and the way that concepts of public interest and the rhetoric surrounding it have been involved in shaping the law of copyright While many histories of copyright focus on the eighteenth century this book's main concern is with the period after 1774 The nineteenth century was the period during which the boundaries of copyright as we know it today were drawn and ideas of public interest were integral to this process but in different and complex ways The book engages with this complexity by moving beyond debates about the appropriate duration of copyright and considers the development of other important features of copyright law such as the requirement of legal deposit the principle that some works will not be subject to copyright protection on the grounds of public interest and the law of infringement While the focus of the book is on literary copyright it also traces the expansion of copyright to cover new subject matters such as music dramatic works and lectures The book concludes by examining the making of the 1911 Imperial Copyright Act the statute upon which the law of copyright in Britain and in all former British colonies is based The history traced in this book has considerable relevance to debates over the scope of copyright law in the present day it emphasises the contingency and complexity of copyright law's development and current shape as well as encouraging a critical approach to the justifications for copyright law
