Ojovan, Carol M Jantzen, 2013-10-31 Radioactive waste management and contaminated site clean up reviews radioactive waste management processes technologies and international experiences Part one explores the fundamentals of radioactive waste including sources characterisation and processing strategies International safety standards risk assessment of radioactive wastes and remediation of contaminated sites and irradiated nuclear fuel management are also reviewed Part two highlights the current international situation across Africa Asia Europe and North America The experience in Japan with a specific chapter on Fukushima is also covered Finally part three explores the clean up of sites contaminated by weapons programmes including the USA and former USSR Radioactive waste management and contaminated site clean up is a comprehensive resource for professionals researchers scientists and academics in radioactive waste management governmental and other regulatory bodies and the nuclear power industry Explores the fundamentals of radioactive waste including sources characterisation and processing strategies Reviews international safety standards risk assessment of radioactive wastes and remediation of contaminated sites and irradiated nuclear fuel management Highlights the current international situation across Africa Asia Europe and North America specifically including a chapter on the experience in Fukushima Japan Disposal of All Forms of Radioactive Waste and Residues Michael Lersow, Peter Waggitt, 2019-11-16 This book describes repository solutions for all types of radioactive waste and residues in different geotechnical repository structures The focus is initially on existing or planned final disposal sites in Germany and the process of finding sites However international comparisons are drawn especially to locations in the US This affects both the repository structures and the legal requirements The radioactive substances considered include residues from uranium ore processing as well as low and intermediate level radioactive waste up to heat generating high level radioactive wastes such as spent fuel and vitrified waste from reprocessing In order to evaluate the repository structures and their inventories a dimensionless radiotoxicity index $A_i F_i$ activity of radionuclide quantity A_i related to the exemption limit of radionuclide F_i has been

introduced This gives the reader a well founded overview of the degree of inconsistency in the handling of safety requirements for the respective geotechnical environmental structures This creates the necessary transparency on this issue which has not been previously available and is required by stakeholders today The long term security the duration of the observation period and the certainty of the safety prognosis are also discussed in the book as well as the participation of subsequent generations in current and possible future repositories This is vital as nuclear energy will continue to be used worldwide in the long term The international repository projects presented have all been subjected to the same evaluation criteria This applies both to existing operational project as well as those about to be commissioned and the processes for seeking locations Special attention has been paid to monitoring both operational and long term monitoring This broad range of topics makes this book a very valuable read for both the interested public and the professional world Solar Panel
