GEOGRAPHY - Volume I Maria Sala, 2009-07-17 Geography is a component of Encyclopedia of Earth and Atmospheric Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias. Geographical perceptions can be traced from very ancient cultures although geography as a science started its development during the eighteenth century; it was firmly established after the Darwinian revolution and many of its fundamentals appeared during the nineteenth century. The history of geography is closely connected with the history of human society. Geography embraces both the physical and human worlds and aims to bridge natural and human sciences. For a geographer, although the environment and its conservation is a crucial item, it is also fundamentally concerned with the living standards of humankind. Although its wide embrace may be seen as a weakness, diversification is also strength and an attraction. Approaches are multidisciplinary, exploring the complex linkages between the cultural and the natural. These favor cross-cultural communication and mutual understanding at a global scale. There is a geographical basis to most of the outstanding political problems and geographical reasons to explain them. The subject matter of the geography theme is presented basically on how the subject matter is taught presently at the universities and following the many paths its practitioners are following in doing research. It introduces modern subject matters and goes much further than a simple description of places and travels. The theme has been divided into four main topics: Foundations, Physical Geography, Human Geography, and Technical matters. The scope of the foundation topic is to present an overview of the basis of the geographical field, its scope, history, methods, and its importance in education. The chapters included are: Main Stages of the Development Theory and Methods and Geographical Education. The Physical Geography topic includes the historical background of the geographical study of the Earth, natural environment, and the main fields cultivated by geographers. It consists of eight chapters on basic research fields which are: Geomorphology, Climatology, Hydrology, Biogeography, Soil Geography, Coastal Systems, Ocean Geography, Mountain Geocology, and two chapters on environmental issues: Natural Hazards and Land Degradation and Desertification. In the Human Geography topic, six chapters discuss the more current fields that is: Population, Cultural and Social, Agricultural and Rural Industries and Transport, Economic Activities, and Urban Geography. Three chapters present subjects developed more recently: Medical, Political, and Tourism geographies. Finally, the Regional approach is presented as the most traditional and integrative field. These volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research

Health Promotion in Medical Education Ann Wylie, Tangerine Holt, 2018-05-08 Health promotion has been a relatively overlooked area in modern medical and health professional vocational curricula This practical and informative book aims to redress the balance towards health promotion being a visible integrated curricular component with agreed principles on quality in health promotion teaching across various

Harper,2004-03-11 Advances in genetics over the past 50 years have been dramatically changed the understanding and management of inherited disorders and are beginning to have a major impact on the practice of medicine overall The rapidity of these advances means that clinicians and scientists in the field are often unfamiliar with the key research that has led to many developments that now are accepted and familiar Few have time to search or the original papers which are scattered and often difficult to obtain This collection has been edited mainly for medical geneticists and genetics researchers who wish to learn more about how their field originated and developed Brief clearly written commentaries on each paper and section place the work in its current context and serve to unify the different parts of the book They also help make it a readable and authoritative source of information The papers chosen fall into several groups First are classic descriptions of important genetic disorders often from the pre mendelian era The following sections deal with the definition of human mendelian inheritance the origins of human cytogenetics the early development of the human gene map and the transition from biochemical genetics to human molecular genetics the relatively recent studies that have shown how mendelian principles are increasingly modifiable and finally advances in the treatment and management of genetic disorders which are placed in their social context *Nuclear Science Abstracts* ,1976 Transposons and the Dynamic Genome Dirk-Henner Lankenau,Jean-Nicolas Volff,2009-06-30 This volume gives an overview on mobile DNA and how such contradiction to the obligatory stability of genomes can be understood Obviously an understanding can only be achieved by cutting deeply into the evolutionary history of life
