Scientific Research Methods in Geography and Environmental Studies Daniel Montello, Paul Sutton, 2012-12-10 Covers a broad range of subjects that undergraduates in the discipline should be familiar and comfortable with upon graduation. From chapters on the scientific method and fundamental research concepts to experimental design, sampling and statistical analysis, the text offers an excellent introduction to the key concepts of geographical research. The content is applicable for students at the beginning of their studies right through to planning and conducting dissertations. The book has also been of particular support in designing my level 1 and 2 tutorials which cover similar ground to several of the chapters. Joseph Mallalieu, School of Geography, Leeds University. Montello and Sutton is one of the best texts I've used in seminars on research methodology. The text offers a clear balance of quantitative vs qualitative and physical vs human which I've found particularly valuable. The chapters on research ethics, scientific communication, information technologies and data visualization are excellent. Kenneth E. Foote, Department of Geography, University of Colorado at Boulder. This is a broad and integrative introduction to the conduct and interpretation of scientific research covering both geography and environmental studies. Written for undergraduate and postgraduate students, it explains both the conceptual and the technical aspects of research as well as all phases of the research process. Combines approaches in physical geography and environmental science, human geography and human environment relations and geographic and environmental information techniques such as GIS, cartography and remote sensing. Combines natural and social scientific approaches common to subjects in geography and environmental studies. Includes case studies of actual research projects to demonstrate the breadth of approaches taken. It will be core reading for students studying scientific research methods in geography, environmental studies and related disciplines such as planning and earth science.

Writing Theologically Eric D. Barreto, 2015-03-19 Of course, by writing we refer to the kinds of reflections, essays and exams students will have to complete in the seminary classroom. But writing also encompasses the many modes of communication and self-discovery that creative expression can unlock. Writing Theologically introduces writing not just as an academic exercise but as a way for students to communicate the good news in rapidly changing contexts as well as to discover and craft their own sense of vocation and identity. Most important will be guiding students to how they might begin to claim and hone a distinctive theological voice that is particularly attuned to the contexts of writer and audience alike. In a collection of brief, readable essays, this volume edited by Eric D. Barreto emphasizes the vital skills, practices and values involved in writing theologically. That is how might students prepare themselves to communicate effectively and creatively, clearly and beautifully the insights they gather during their time in seminary. Each contribution includes practical advice about best practices in writing theologically; however, the book also stresses why writing is vital in the self-understanding of the minister as well as her or his public communication of the good news.
