Dawn of the DAW Adam Patrick Bell, 2018-02-08 Dawn of the DAW tells the story of how the dividing line between the traditional roles of musicians and recording studio personnel producers recording engineers mixing engineers technicians etc has eroded throughout the latter half of the twentieth century to the present Whereas those equally adept in music and technology such as Raymond Scott and Les Paul were exceptions to their eras the millennial music maker is ensconced in a world in which the symbiosis of music and technology is commonplace As audio production skills such as recording editing and mixing are increasingly co-opted by musicians teaching themselves in their do it yourself DIY recording studios conventions of how music production is taught and practiced are remixed to reflect this reality Dawn of the DAW first examines DIY recording practices within the context of recording history from the late nineteenth century to the present Second Dawn of the DAW discusses the concept of the studio as musical instrument and the role of the producer detailing how these constructs have evolved throughout the history of recorded music in tandem Third Dawn of the DAW details current practices of DIY recording how recording technologies are incorporated into music making and how they are learned by DIY studio users in the musically chic borough of Brooklyn Finally Dawn of the DAW examines the broader trends heard throughout summarizing the different models of learning and approaches to music making Dawn of the DAW concludes by discussing the ramifications of these new directions for the field of music education

available today **The Sound Production Handbook** Don Atkinson, 2013-10-23 The Sound Production Handbook is designed to be a useful guide to current operational sound practices within the broadcast industry. Multi-skilling within the industry has meant that the role of the sound engineer is now much wider with operators no longer specialising in any area but expected to possess a broad range of skills. Basic sound theory is covered and presented in such a way as to provide enough theoretical information for the professional or student to enable them to perform the many sound roles required whether on location or in the studio. However the emphasis of the book is an operational one covering all aspects of sound operations within television broadcasting. The book follows a framework similar to that of NVQs and can be used as a practical source of information for those aspiring to those qualifications. The Sound Production Handbook is a useful source of guidance and reference for any operators who are changing roles and broadening their experience within the industry and provides an insight to current requirements not only from a technical point of view but also from a practical perspective.
