Teachers Perception Knowledge And Use Modeling For Teaching:

Teachers' Perception, Knowledge And Use Modeling For Teaching Habtamu Shenkut, 2014 This work was intended to access teachers' perceptions and statistical knowledge for teaching statistics using modeling in secondary schools. The data were collected from secondary school mathematics teachers in Addis Ababa, Ethiopia. Questionnaire and interview were instruments employed for data collection. Thus, the findings indicated that most respondents have positive perceptions for teaching statistics topics. Other main finding was teachers' statistical knowledge. The results indicated that a minority of teachers haven't necessary statistical knowledge for teaching statistical topics. Because in my country Ethiopia, mathematics teachers were trained to teach mathematics rather than statistics and they were took sometimes one introductory statistic course. But in secondary schools mathematics book there are some statistical topics to be taught. It was also found that teachers didn't use modeling when they teach those topics because of different challenges like teacher's knowledge, time, motivation, facilities, and students' background knowledge.

Understanding Science Teachers' Professional Knowledge Growth Michel

Grangeat, 2015-12-09 Science education has to be improved in order to become more responsive to the needs of society confronted with a rapidly changing world. Bringing science teaching up to a higher level is a key factor in this endeavour. The authors of this book think about teachers as part of the immediate and large communities and systems in which they function. They consider the development of teachers' professional knowledge as a continuous process that depends on the communities they are committed to and participate in, the discipline they are teaching, the social context in which they perform the instruments made available in their environment, and their day to day classroom experience. From this perspective, each teacher learns in an individual way but cannot learn without relying on their colleagues and other partners. Such professional knowledge is partly tacit and explicit and thus possessed by teachers, experts, and researchers. Coordinating activity theory and models of pedagogical content knowledge (PCK), the book provides a better understanding of the growth of science teacher professional knowledge. The chapters are organised around shared perspectives and themes, and based on research findings. The emerging model can inform pre-service teacher educators, researchers, and students. The book results from exchanges and symposia during international conferences ECER, ESERA, and from a two-day seminar held at Université Grenoble Alpes in March 2015.
