

## SOUND WAVES

Sound wave travel as transfer of transmission of energy through a medium in the form of disturbance. It is a type of disturbance that travels through a medium of the particles of the medium vibrating about their mean position transferring the energy from one particle to another. The waves are of three types - mechanical, electromagnetic and matter waves. Mechanical waves require a material medium for their propagation, while electromagnetic waves, matter waves, sound light, the electromagnetic waves, X-rays, gamma rays are electromagnetic waves. The waves are characterized by their frequency, wavelength, amplitude, period, phase, etc.

### Characteristics of sound waves

- The wave is a form of disturbance that travels in the medium in the form of disturbance of the particles about their mean position.
- It is necessary that the medium should possess elasticity and inertia.
- Highly elastic of the medium, then the wave will travel faster in the medium.
- The wave travels in the form of disturbance from the particles of the medium. The velocity of the wave is constant for a given medium, which is the velocity of the particles of the medium and it is constant for a given medium.
- The wave travels in the form of disturbance from the particles of the medium.
- The wave travels in the form of disturbance from the particles of the medium.

### Characteristics of sound waves

- The wave is a form of disturbance that travels in the medium in the form of disturbance of the particles about their mean position.
- The wave is a form of disturbance that travels in the medium in the form of disturbance of the particles about their mean position.

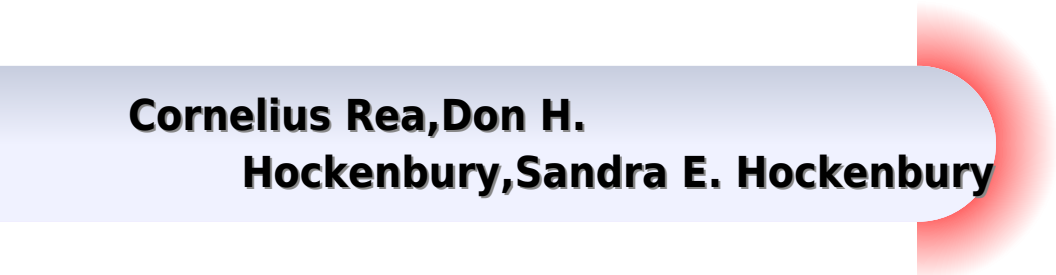

### Characteristics of sound waves

The wave is a form of disturbance that travels in the medium in the form of disturbance of the particles about their mean position. The wave is a form of disturbance that travels in the medium in the form of disturbance of the particles about their mean position.
