Pedigree Worksheet

Answer Key

Interpreting a Human Pedigree

Use the pedigree below to answer 1-5

1. In a pedigree, a square represents a male. If it is darkened he has hemophilia; if clear, he has normal blood clotting.

a. How many males are there? 8

b. How many males have hemophilia? 3

2. A circle represents a female. If it is darkened, she has hemophilia; if open she is normal.

a. How many female are there? 8

b. How many females have hemophilia? 2

3. A marriage is indicated by a horizontal line connecting a circle to a square.

a. How many marriages are there? 3

4. A line perpendicular to a marriage line indicates the offspring. If the line ends with either a circle or a square, the couple had only one child. However, if the line is connected to another horizontal line, then several children were produced, each indicated by a short vertical line connected to the horizontal line. The first child born appears to the left and the last born to the right.

Harper,2004-03-11 Advances in genetics over the past 50 years have been

dramatically changed the understanding and management of inherited disorders and are beginning to have a major impact on the practice of medicine overall. The rapidity of these advances means that clinicians and scientists in the field are often unfamiliar with the key research that has led to many developments that now are accepted and familiar. Few have time to search for the original papers which are scattered and often difficult to obtain. This collection has been edited mainly for medical geneticists and genetics researchers who wish to learn more about how their field originated and developed. Brief clearly written commentaries on each paper and section place the work in its current context and serve to unify the different parts of the book. They also help make it a readable and authoritative source of information. The papers chosen fall into several groups. First are classic descriptions of important genetic disorders often from the pre-Mendelian era. The following sections deal with the definition of human Mendelian inheritance, the origins of human cytogenetics, the early development of the human gene map and the transition from biochemical genetics to human molecular genetics, the relatively recent studies that have shown how Mendelian principles are increasingly modifiable, and finally advances in the treatment and management of genetic disorders which are placed in their social context.
