

Traumatic Brain Injury (TBI): Pediatric Causes and Prevention Strategies

TBI is an injury caused by a blow, jolt, or penetrating object that disrupts normal functioning of the brain.

CDC reports that more than **2.8 million** U.S. people sustain a TBI each year; of those, more than **55,000** die and more than **280,000** are hospitalized.¹

TBI can be **mild to severe**.

Severe TBI can lead to permanent disability and even death.

75% of brain injuries are mild (not life-threatening). Concussion is a type of mild TBI.²

All types of TBI can seriously affect a child's daily life.

Brain injury can cause problems with speaking or understanding, movement or mobility, thinking or memory, and personality or mood.

Causes

The **leading causes of TBI in the United States** are¹

Falls

About half of brain injuries in children are caused by falls from objects like stairs and bicycles.

Unintentional blunt trauma

28% of brain injuries in children are caused by being hit in the head with an object, like a baseball or soccer ball.

Motor vehicle crashes

Car accidents are the **#1** cause of TBI-related death in children older than age 5.

Homicide

Homicide is the **#1** cause of TBI-related death in children age 4 and younger.

Prevention Strategies

Take the following actions to **reduce the risk of TBI in children**.

Use a child safety seat or a seat belt when the child is in a motor vehicle.

Make sure the child wears a helmet when riding a bicycle, skateboarding, and playing sports like hockey and football.

Install window guards and stair safety gates at home.

Avoid shaking your baby. Learn how to prevent shaken baby syndrome.³

A Practical Guide to Head Injury Rehabilitation Michael D. Wesolowski, Arnie H. Zencius, 2013-06-29 Behavioral neuropsychology presents at once a challenge and an opportunity for the field of behavior analysis A great diversity of problem areas including education classroom management child rearing retardation and industry have been treated effectively by the behavior analytic approach which has traditionally and quite deliberately chosen to deemphasize physiology and cognitive variables Yet brain injury by its nature entails neurological insult that is often closely related to specific cognitive dysfunctions The challenge for behavior analysis is to develop effective treatments for a disorder with such clearly defined tripartite characteristics The opportunity exists for behavior analysis to expand its conceptual basis as well as to provide benefits to patients otherwise despairing of assistance Case histories demonstrate over 20 years of successful applications of behavior analysis to brain injured individuals indicating that some applications are possible but are these reports notable exceptions or the harbingers of a new general therapeutic approach The present book describes an overall focused behavioral program for dealing with the diversity of brain injury problems in a general brain injury rehabilitation setting The authors describe what types of neurological damage are associated with specific types of cognitive emotional dysfunction and in turn with specific types of behavioral dysfunction thereby demonstrating how the choice of behavioral

treatment is guided by the neurological and subjective assessment The result is a conceptually unified approach The distinctive value of this book lies in the detail as well as the programmatic guidelines for actual implementation of this behavioral approach Fuhrman & Zimmerman's Pediatric Critical Care E-Book Jerry J. Zimmerman, Alexandre T.
