Ginsburg,Huntington F Willard, PhD,2012-11-29 *Genomic and Personalized Medicine* Second Edition winner of a 2013 Highly Commended BMA Medical Book Award for Medicine is a major discussion of the structure history and applications of the field as it emerges from the campus and lab into clinical action As with the first edition leading experts review the development of the new science the current opportunities for genome based analysis in healthcare and the potential of genomic medicine in future healthcare The inclusion of the latest information on diagnostic testing population screening disease susceptibility and pharmacogenomics makes this work an ideal companion for the many stakeholders of genomic and personalized medicine With advancing knowledge of the genome across and outside protein coding regions of DNA new comprehension of genomic

variation and frequencies across populations the elucidation of advanced strategic approaches to genomic study and above all in the elaboration of next generation sequencing genomic medicine has begun to achieve the much vaunted transformative health outcomes of the Human Genome Project almost a decade after its official completion in April 2003 Highly Commended 2013 BMA Medical Book Award for Medicine More than 100 chapters from leading researchers review the many impacts of genomic discoveries in clinical action including 63 chapters new to this edition Discusses state of the art genome technologies including population screening novel diagnostics and gene based therapeutics Wide and inclusive discussion encompasses the formidable ethical legal regulatory and social challenges related to the evolving practice of genomic medicine Clearly and beautifully illustrated with 280 color figures and many thousands of references for further reading and deeper analysis *Accessions List, South Asia Library of Congress. NASA's first imaging polarimeter on board a comprehensive Earth science mission. These instruments bring new capability to the science community but also new challenges. Fundamentals such as basic radiative transfer models require review, enhancements and benchmarking in order to meet the needs of the atmosphere-ocean communities in the PACE era. Both OCI and MAP will bring opportunities to continue heritage climate data records of aerosols and clouds and to advance characterization of these atmospheric constituents with new macrophysical and microphysical parameters. The ability to better characterize atmospheric constituents is a necessity to better separate ocean and atmosphere signals in order to fully realize the potential of PACE measurements for oceanic observations. Atmospheric correction in the PACE era must address the expanded wavelength range and resolution of OCI images requiring new approaches that go beyond heritage algorithms. This Research Topic encompasses fundamental radiative transfer studies with application to the atmosphere-ocean or coupled atmosphere-ocean system. It includes remote sensing of aerosols, clouds and trace gases over ocean or over land but with particular focus on algorithms that take advantage of OCI's new capabilities or multi-angle polarimetry. The Research Topic embraces studies of atmospheric correction over ocean including addressing issues of aerosols, cloud masking, foam, bubbles, ice, etc. as well as ocean bio-optics and biogeochemical studies taking advantage of the PACE and polarization spectral capabilities.
