Improving Teacher Knowledge in K-12 Schooling Xiaoxia A. Newton, 2018-03-15 This volume examines how several key components of the mathematics education system in the United States fail to provide teachers with adequate and effective tools to teach mathematics in K 12 classrooms These components consist of teachers own learning experiences as students in K 12 classrooms their undergraduate or graduate trainings in mathematics and their in service professional development trainings Newton argues that unless we improve these system components as a whole and recognize the importance of teaching future mathematics teachers explicitly and rigorously the topics they are expected to teach teachers will continue to recycle a body of incoherent and incomprehensible mathematical knowledge to their students because these are the only types of mathematical knowledge they have at their disposal both in terms of what they themselves have learned as K 12 students and in terms of the mathematical resources available to them including the textbooks they rely on to teach as mathematics teachers

Analysis of Arithmetic for Mathematics Teaching Gaea Leinhardt, Ralph Putnam, Rosemary A. Hattrup, 2020-11-25

This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh. The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction. The chapters deal with the research on and conceptual analysis of specific arithmetic topics: addition, subtraction, multiplication, division, decimals, and fractions, or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics: intuition, number sense, and estimation. Serving as a link between the communities of cognitive researchers and mathematics educators, the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well. *Kids Learn! Getting Ready for 1st Grade (Second Language Support) - eBook*, 2014-01-15. Keep students sharp and prevent learning loss with activities aligned to Common Core and other state standards in this second edition bilingual resource. Students risk falling behind at the start of a new school year without practicing skills learned in the previous year. This parent involvement resource is designed to bridge the away from school gap with reading, writing, and mathematics activities that reinforce learning from kindergarten and prepare students for first grade. A 14-page introduction section for parents and instructions for each student activity are written in both English and Spanish to help parents get involved in their child's education. With quick and fun family activities, this is the perfect full-color resource to set students up for a successful school year.

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01. The audience remains much the same as for the 1992 Handbook: namely, mathematics education researchers and other scholars conducting work in mathematics education. This group includes college and university faculty, graduate students, investigators in research and development centers, and staff members at federal, state, and local agencies that conduct and use research within the discipline of mathematics. The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work. The Handbook should also be a useful textbook for graduate research seminars. In addition to the audience mentioned above, the present Handbook contains chapters that should be relevant to four other groups: teacher educators, curriculum developers, state and national policy makers, and test developers and others involved with assessment. Taken as a whole, the chapters reflect the mathematics education research community's willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community.
