Large-Scale Studies in Mathematics Education James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05. In recent years, funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large-scale studies with experimental and quasi-experimental designs looking for objective truths. Educational researchers have recently begun to use large-scale studies to understand what really works, from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale-up for large implementation of an intervention. Moreover, modeling student learning developmentally, taking into account cohort factors, issues of socioeconomics, local political context, and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures, but these methods are not yet common knowledge in the mathematics education community. In fact, currently, there is no volume devoted to discussion of issues related to large-scale studies and to report findings from them. This volume is unique as it directly discusses methodological issues in large-scale studies and reports empirical data from large-scale studies. Encyclopedia of Education and Human Development Stephen J.

Farenga, Daniel Ness, 2015-07-17 This comprehensive and exhaustive reference work on the subject of education from the primary grades through higher education combines educational theory with practice making it a unique contribution to the educational reference market. Issues related to human development and learning are examined by individuals whose specializations are in diverse areas including education, psychology, sociology, philosophy, law, and medicine. The book focuses on important themes in education and human development. Authors consider each entry from the perspective of its social and political conditions as well as historical underpinnings. The book also explores the people whose contributions have played a seminal role in the shaping of educational ideas, institutions, and organizations and includes entries on these institutions and organizations. This work integrates numerous theoretical frameworks with field-based applications from many areas in educational research.

Lessons Learned from Research on Mathematics Curriculum Denisse R. Thompson, Mary Ann Huntley, Christine Suurtamm, 2024-09-01 This volume focuses on research related to mathematics curriculum. But rather than focusing on results of research, it focuses on lessons learned about conducting research on curriculum, whether about design and development, analysis of curriculum in the form of official standards or textbook instantiations, teacher intentions related to curriculum implementation, or actual classroom enactment. For scholars interested in curriculum research, the volume offers lessons about conducting curriculum research that have been learned by others engaged in such work, including frameworks, tools, and techniques as well as challenges and issues faced with solutions to address them. Sharing lessons from authors of different countries strengthens the broader mathematics research community and provides insights that can help researchers make important strides forward in research on mathematics curriculum.

Contemporary Readings in Curriculum Barbara Slater Stern, Marcella L. Kysilka, 2008-03-20 This book of readings provides readers with an historical context of the curriculum field. *Contemporary Readings in Curriculum* focuses on how curriculum may be organized and what is happening in the academic and co-curriculum of schools. The readings also address the political nature and current debates of curriculum and how we must be attentive to the increasingly diverse populations found in our schools.

Teaching Creatively and Teaching Creativity Mary Banks Gregerson, Heather T. Snyder, James C. Kaufman, 2012-11-13 Creative teaching as well as teaching creativity are cutting edge issues in psychology today as recent academic and popular media coverage has shown. This volume expands on that interest with chapter authors drawn from interdisciplinary areas. It includes examples of creatively teaching across the education system including preschool, K-12, undergraduate, and graduate level education. The variety of subjects covered by the chapters include psychology, math, science, and reading. In addition to creative teaching, which may lead to enhanced learning and achievement in students as well as enhanced creativity, another focus is teaching with the objective to enhance creativity.
