### **Professional Development for Inquiry-Based Science**

**Teaching and Learning** Olia E. Tsivitanidou, Peter Gray, Eliza Rybska, Loucas Louca, Costas P. Constantinou, 2018-09-03 This book examines the implementation of inquiry based approaches in science teaching and learning It explores the ways that those approaches could be promoted across various contexts in Europe through initial teacher preparation induction programmes and professional development activities It illustrates connections between scientific knowledge deriving from the science education research community teaching practices deriving from the science teachers community and educational innovation Inquiry Based Science Teaching and Learning IBST L has been promoted as a policy response to pressing educational challenges including disengagement from science learning and the need for citizens to be in a position to evaluate evidence on pressing socio scientific issues Effective IBST L requires well prepared and skilful teachers who can act as facilitators of student learning and who are able to adapt inquiry based activity sequences to their everyday teaching practice Teachers also need to engage creatively with the process of nurturing student abilities and to acquire new assessment competences The task of preparing teachers for IBST L is a challenging one This book is a resource for the implementation of inquiry oriented approaches in science education and illustrates ways of promoting IBST L through initial teacher preparation induction and professional development programmes

*Teaching and Learning about Science* Derek Hodson, 2009-01-01 Findings generated by recent research in science education international debate on the guiding purposes of science education and the nature of scientific and technological literacy official and semi official reports on science education including recommendations from prestigious organizations such as AAAS and UNESCO and concerns expressed by scientists environmentalists and engineers about current science education provision and the continuing low levels of scientific attainment among the general population have led to some radical re thinking of the nature of the science curriculum There has been a marked shift of rhetorical emphasis in the direction of considerations of the nature of science model based reasoning inquiry based learning scientific argumentation and the use of language rich learning experiences reading writing talking to enhance concept acquisition and development These findings arguments and pronouncements seem to point very clearly in the direction of regarding science education as a study of scientific practice This book presents a comprehensive research based account of how such a vision could be assembled into a coherent curriculum and presented

to students in ways that are meaningful motivating and successful The author takes what might be described as an anthropological approach in which scientists are studied as a socially economically and politically important community of people This group has its own distinctive language body of knowledge investigative methods history traditions norms and values each of which can be studied explicitly systematically and reflectively This particular approach was chosen for the powerful theoretical overview it provides and for its motivational value especially for students from sociocultural groups currently under served by science education and under represented in science The book which is both timely and important is written for teachers student teachers graduate students in education teacher educators curriculum developers and those responsible for educational policy It has the potential to impact very substantially on both pre service and inservice science teacher education programmes and to shift school science education practice strongly in the direction currently being advocated by prominent science educators

working on Project SEPIA extending their work in Pittsburgh schools to the design of curricula that support epistemological aspects of scientific inquiry including argumentation In that spring we attended a NARST session in St Louis where Gregory Kelly Steven Druker and Catherine Chen presented a paper about argumentation As a consequence a symposium about argumentation was organised possibly the first of its kind at the 1997 NARST meeting in Chicago including papers from Kelly and colleagues and from Jimenez Aleixandre Bugallo and Duschl The symposium was attended among others by Rosalind Driver who had just submitted an application for funding of an argumentation project based at King's College London a project Erduran would incidentally work on after Driver's untimely death From this time frame in the 1990s to the present day argumentation studies in science education have increased at a rapid pace from stray papers for which we were unable to find an appropriate strand in a conference to a wealth of research base exploring ever more sophisticated issues
