Handbook on Federated Learning Saravanan Krishnan,A. Jose Anand,R. Srinivasan,R. Kavitha,S. Suresh,2023-12-15 Mobile wearable and self driving telephones are just a few examples of modern distributed networks that generate enormous amount of information every day Due to the growing computing capacity of these devices as well as concerns over the transfer of private information it has become important to process the part of the data locally by moving the learning methods and computing to the border of devices Federated learning has developed as a model of education in these situations Federated learning FL is an expert form of decentralized machine learning ML It is essential in areas like privacy large scale machine education and distribution It is also based on the current stage of ICT and new hardware technology and is the next generation of artificial intelligence AI In FL central ML model is built with all the data available in a centralised environment in the traditional machine learning It works without problems when the predictions can be served by a central server Users require fast responses in mobile computing but the model processing happens at the sight of the server thus taking too long The model can be placed in the end user device but continuous learning is a challenge to overcome as models are programmed in a complete dataset and the end user device lacks access to the entire data

package Another challenge with traditional machine learning is that user data is aggregated at a central location where it violates local privacy policies laws and make the data more vulnerable to data violation This book provides a comprehensive approach in federated learning for various aspects *Technical Analysis from A to Z* Steven B.
