

MAKE SENSE OF SHOOTING MODES

The mode you choose affects the amount of control you have over camera settings

Auto mode

If you're a complete novice, this mode is ideal because the camera takes care of all the settings automatically.

Auto Flash Off mode

The same as Auto, but for museums, theatres or indoor sports venues where using a flash might get you thrown out!

Portrait mode

The camera softens skin tones and uses a wide aperture to throw the background out of focus.

Landscape mode

Designed for vivid landscape shots taken in daylight. The built-in flash is switched off and you might need a tripod in poor light.

Child mode

In this mode, the camera makes backgrounds and clothing colourful but keeps skin tones soft and natural looking.

Sports mode

The flash is switched off and the camera uses faster shutter speeds to help freeze fast-moving subjects.

Close-up mode

This favours a smaller aperture to improve depth of field. Consider using a tripod when there's a risk of camera-shake.

Night Portrait mode

The flash fires to light your subject, but the camera uses a slower shutter speed to capture the background lighting too.

Manual mode

This is designed for experts. You choose the shutter speed and aperture yourself, though the camera still suggests settings.

Aperture Priority

Use this if you want to choose the aperture yourself. The camera will set the shutter speed automatically for correct exposure.

Shutter Priority

Use this if you want to choose the shutter speed yourself. The camera will set the aperture automatically so that the exposure is correct.

Program AE mode

Ideal for general use, or when there's little time to think. The camera sets the shutter speed and aperture but you get to control other settings.

GUIDE

A special feature on the D3000 that shows you what to do as you're taking pictures. It's a great way for beginners to learn about photography.

Crime Scene Photography Edward M. Robinson, 2010-02-05. Crime Scene Photography Second Edition offers an introduction to the basic concepts of forensic picture taking. The forensic photographer or more specifically the crime scene photographer must know how to create an acceptable image that is capable of withstanding challenges in court. The photographic theory and principles have to be well grounded in the physics of optics, the how to recommendations have to work and the end result must be admissible in court. Based on the author's years of experience in the field at both the Arlington County and Baltimore County Police Departments, this book blends the practical functions of crime scene processing with theories of photography to guide the student in acquiring the skills, knowledge and ability to render reliable evidence. This text has been carefully constructed for ease of use and effectiveness in training and was class tested by the author at George Washington University. Beginning August 2008, this book will be required reading by the IAI Crime Scene Certification Board for all levels of certification through August 2011. Over 600 full color photographs. Two new chapters on The History of Forensic Photography and Digital Image Processing of Evidentiary Photography. An essential reference for crime scene photography including topics such as Composition, the Inverse Square Law, Court Cases affecting photography, Digital Image Processing and Photogrammetry. Required reading by the Crime Scene Certification Board of the International Association for Identification (IAI) for all levels of certification.
