BIM 3.0 Dal disegno alla simulazione Carlo Argiolas, Emanuela Quaquero, Riccardo Prenza, 2016-01-03T00:00:00+01:00
I disegni esistono per rappresentare l'edificio le simulazioni esistono per anticiparne le prestazioni
Questo libro tratta di processi e nello specifico di Building Information Modeling più comunemente conosciuto con l'acronimo di BIM
L'accezione completa di BIM rimanda ad una filosofia di processo in cui l'edificio viene costruito prima della sua effettiva realizzazione fisica all'interno di un ambiente virtuale attraverso la collaborazione ed i contributi di tutti gli attori coinvolti nel progetto come architetti progettisti consulenti analisti energetici contractor fornitori facility manager e proprietari
Caratteristica di questa filosofia un approccio altamente strategico al processo ed al raggiungimento degli obiettivi di progetto in cui l'oggetto architettonico e le sue prestazioni possono essere valutati nella loro interezza già in fase di progettazione
La considerazione dell'edificio si sposta quindi dal semplice prodotto architettonico ultimato al suo intero life cycle
La nascita di questa filosofia di processo dovuta alla sostanziale incapacità dei mezzi di progetto tradizionali di supportare il settore delle costruzioni di fronte alle complesse trasformazioni che caratterizzano il nostro tempo
Obiettivo dello studio quello di inserire in prima istanza il Building Information Modeling all'interno di una narrazione capace di trasmettere gli esiti operativi del concetto di simulazione rispetto al paradigma tradizionale di progetto
Il libro pertanto indirizzato a studenti e professionisti attivi nel settore delle costruzioni intende rappresentare sia un punto di arrivo che una base di lavoro per ulteriori ricerche
