Actinobacteria, a Source of Biocatalytic Tools Dirk Tischler,Willem J. H. van Berkel,Marco W. Fraaije,2019-08-12
Actinobacteria Actinomycetes represent one of the largest and most diverse phyla among Bacteria The remarkable diversity is displayed by various lifestyles distinct morphologies a wide spectrum of physiological and metabolic activities as well as genetics Interestingly most Actinobacteria have a high GC content ranging from 51% to 70% and belong to Gram positive or Gram variable type microbes Many species are well known for large genomes which may be of linear style as in case of rhodococci or circular Many of those harbor linear megaplasmids as a kind of genetic storage device Frequently gene redundancy is reported and in most cases the evolutionary history or a functional role remains enigmatic Nevertheless these large genomes and megaplasmids provide access to a number of potential homologous biocatalysts which await elucidation Actinobacteria are well known for their biotechnological potential which is exemplarily described for amino acid producing Corynebacteria secondary metabolite producing Streptomyces pathogenic targets as Nocardia and Mycobacteria carotenoid building Micrococcus strains acid fermenting Propionibacteria health and food related Bifidobacterium strains rubber degrading Gordonia species and organic pollutant degrading rhodococci among others In many cases individual pathways or enzymes can be modified or recombinantly employed for biocatalysis Even some genetic tools to work directly in those microbes have been successfully used as for example in Corynebacterium or in Rhodococcus species During the last decade

more and more genomes have been sequenced and made available for data mining and become accessible by state of the art genomic manipulation methods as minimal genomes knock out or artificial evolution With respect to this large and ancient phylum many questions can be asked either from a scientific or industrial point of view In order to provide some crystallization points we like to raise some examples as follows How small can be an actinobacterial genome What is the driving force to comprise large and repetitive genomes megaplasms What is needed to generate an actinobacterial power house for industry Can we annotate novel biocatalysts from scratch and improve functional annotation What are common and different features with respect to other bacteria and or fungi How many novel antibiotics are hidden among Actinobacteria Is there more potential among extremophile members or are they only specialized Here especially the production of natural compounds is of high interest

Trace Environmental Quantitative Analysis Paul R. Loconto, 2020-12-27 A thorough and timely update this new edition presents principles techniques and applications in this sub discipline of analytical chemistry for quantifying traces of potentially toxic organic and inorganic chemical substances found in air soil fish and water as well as serum plasma urine and other body fluids The author addresses regulatory aspects calibration verification and the statistical treatment of analytical data including instrument detection limits quality assurance quality control sampling and sample preparation and techniques that are used to quantify trace concentrations of organic and inorganic chemical substances Key Features Fundamental principles are introduced for the more significant experimental approaches to sample preparation Principles of instrumental analysis determinative techniques for trace organics and trace inorganics analysis An introduction to the statistical treatment of trace analytical data How to calculate instrument detection limits based on weighted least squares confidence band calibration statistics Includes an updated series of student tested experiments

Analytical Chemistry Associated with the Destruction of Chemical Weapons M. Heyl, Raymond R. McGuire, 2012-12-06 One of the major problems associated with the disposal of chemical weapons is that the agents have degraded over time some quite seriously Detecting and identifying the products of this decomposition are necessary prerequisites to the safe complete and environmentally benign destruction of stockpiled weapons The book presents and discusses both basic and novel techniques in a variety of areas of analytical chemistry which are relevant to achieving the ultimate destruction of chemical weapons Presentations address sample collection and preparation mass spectrometry chromatographic techniques NMR and air monitoring techniques The work shows that analytical methods do exist to effectively support the destruction of chemical munitions While further research is needed the book provides an excellent baseline for further advances in the field

Perspectives in Flavor and Fragrance Research Philip Kraft, 2005-05-30 It happened in Manchester May 12 14 2004 For the fifth time since the early 1990 s the Royal Society of Chemistry and the Society of the Chemical Industry jointly held their flavours fragrances conference this time in the Manchester Conference Centre of the UMIST Manchester The meeting saw over one hundred participants from one dozen countries and was the largest of the series so far In two and a half days
