practices Each chapter discusses different aspects of the use of ICT in education including the role of perceptual processes in learning external cognition as support for interactive learning the role of meta cognition simulation learning environments as cognitive tools the role of science controversy for knowledge integration the use of ICT in the development of educators and the role of narratives in education ICT has great potential for revolutionizing education Large investments of resources are being made often without a strong understanding of how ICT will or should be implemented The expectation is that students will show immediate improvements in terms of their motivation to learn and their learning achievements but reality is different Progress of ICT in education requires more than just computers in the classroom It demands an understanding of the complex processes contributing to human learning and how they interact with new technologies This text provides theoretical perspectives on the learning processes that can be used as a foundation for constructing pedagogically valuable tools based on ICT The combination of results from cognitive science and pedagogy with more practically oriented suggestions for how ICT can be used in various forms of education makes this book suitable for researchers and students in the cognitive and educational sciences as well as for practitioners and planners of education *English Journal* ,1998

Use-Conditional Meaning Daniel Gutzmann,2015-05-28 This book seeks to bring together the pragmatic theory of meaning as use with the traditional semantic approach that considers meaning in terms of truth conditions Daniel Gutzmann

adopts core ideas by the philosopher David Kaplan in assuming that the meaning of expressions such as *oops* or *damn* can be captured by giving the conditions under which they can be felicitously used. He develops a multidimensional approach to meaning called hybrid semantics that incorporates use conditions alongside truth conditions in a unified framework. This new system overcomes the empirical gaps and conceptual problems associated with previous multidimensional systems; it also lessens the burden on the compositional system by shifting restrictions on the combination of use conditional expressions to the lexicon semantics interface instead of building them directly into the combinatoric rules. The approach outlined in this book can capture the entire meaning of complex expressions and also has natural applications in the analysis of sentence mood and modal particles in German as Gutzmann's two detailed case studies demonstrate. The book will be a valuable resource for linguists working in the fields of semantics, pragmatics and philosophy of language as well as to philosophers and cognitive scientists with an interest in meaning in language.
