Signature Lab Series Chemistry:

Chemistry in Primetime and Online National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2011-08-01 It is critical that we increase public knowledge and understanding of science and technology issues through formal and informal learning for the United States to maintain its competitive edge in today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general nontechnical audience. Workshop participants included chemical practitioners (e.g., graduate students, postdocs, professors, administrators, experts on informal learning, public and private funding organizations, science writers, bloggers, publishers, and university communications officers) and television and Internet content producers. *Chemistry in Primetime and Online* is a factual summary of what occurred in that workshop. *Chemistry in Primetime and Online* examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists. *American Laboratory*, 2002. *Trace Chemical Sensing of Explosives* Ronald L. Woodfin, 2007-03-15 This timely book covers the most recent developments in the chemical detection of explosives in a variety of environments. Beginning with a broad view of the need for and the potential applications of chemical sensing, the book considers the issue of how to effectively include chemical sensing into systems designed to find hidden explosives devices. Offering a firsthand look at the latest technologies, direct from those who are actively developing them, the book features a look at the history of the field, including the contributions of recent programs. A brief explanation of the chemistry of various explosives and differences in the place where they may be detected. An introduction to the problems presented by trace element sensing. An overview and comparison of the technologies currently being used and developed. Case studies of field experiences with chemical sensors. A look at the emerging threat of non-traditional explosives. This book is an important reference for explosives engineers, systems engineers involved in the development of related devices, government agencies and NGOs involved in demining efforts, military and law enforcement specialists in mines and explosive ordinance disposal (EOD), as well as environmental scientists and chemists involved in explosives research. In addition to providing field workers with knowledge that will help them decide where and how to search for explosives using chemical sensors, it will provide them

with an understanding of the potential and the limitations of chemical sensing in their search for and identification of dangerous devices Scientific and Technical Aerospace Reports ,1994-05 **On the Surface of Things** Felice Frankel,G.
