The Comprehensive Developmental Neuroscience series is designed to fill this gap, offering the most thorough coverage of this field on the market today and addressing all aspects of how the nervous system and its components develop. Particular attention is paid to the effects of abnormal development and on new psychiatric/neurological treatments being developed based on our increased understanding of developmental mechanisms. Each volume in the series consists of review-style articles that average 15–20 pp and feature numerous illustrations and full references. Volume 3 offers 40 high-level articles devoted mainly to anatomical and functional development of neural circuits and neural systems, as well as those that address neurodevelopmental disorders in humans and experimental organisms. The series offers 144 articles for 2904 full-color pages addressing ways in which the nervous system and its components develop. Features include leading experts in various subfields as Section Editors and article Authors. All articles are peer-reviewed by Section Editors to ensure accuracy, thoroughness, and scholarship. Volume 3 sections include coverage of mechanisms that control the assembly of neural circuits in specific regions of the nervous system, multiple aspects of cognitive development, and disorders of the nervous system arising through defects in neural development.
