Solutions

Section 15.1 What are solutions?

In your textbook, read about the characteristics of solutions.

Use each of the terms below just once to complete the passage.

immiscible	liquid	soluble	solution
insoluble	miscible	solvent	solvent

Air is air! (1) solution of oxygen gas dissolved in nitrogen gas. The oxygen is air is the (2) solvent and nitrogen is the (3) solvent. Because oxygen gas dissolves in a solvent, oxygen gas is air! (4) soluble substances. A substance that does not dissolve is (5) insoluble. (6) liquid solutions are the most common type of solutions. If one liquid is soluble in another liquid, such as acetic acid in water, the two liquids are (7) miscible. However, if one liquid is insoluble in another, the liquids are (8) immiscible.

Read about solvation in aqueous solutions in your textbook.

The diagram shows the hydration of solid sodium chloride to form an aqueous solution. Use the diagram to answer the following questions.

8. Hydration is solvation in which the solvent is water. What is solvation?

Solvation is the process of surrounding solute particles with solvent particles to form a solution.

10. As sodium chloride dissolves in water, what happens to the sodium and chloride ions?

The sodium and chloride ions are separated and surrounded by the water molecules.

11. Explain the attraction of the water molecules around the sodium ions and chloride ions.

Because the sodium ion is positively charged, it attracts the negatively charged portion of the water molecule (the oxygen atom) and repels the positively charged portion of the water molecule (the hydrogen atoms). Because the chloride ion is negatively charged, it attracts the positively charged portion of the water molecule and repels the negatively charged portion.

12. How does the strength of the attraction between water molecules and sodium and chloride ions compare with the strength of the attraction between the sodium ions and chloride ions? How do you know?

The attraction between the water molecules and the sodium and chloride ions is greater than the attraction between the sodium and chloride ions. The greater strength of attraction between the water molecules and the ions is what causes the solvation process to occur.

13. List three ways that the rate of solvation may be increased.

stirring or shaking the solution, breaking the solute into smaller pieces, and heating the solvent

In your textbook, read about heat of solution, solubility, and factors that affect solubility.

For each statement below, write true or false.

true 14. The overall energy change that occurs when a solution forms is called the heat of solution.

false 15. Solubility is a measure of the maximum amount of solute that dissolves in a given amount of solvent at a specified temperature and pressure.

false 16. Solvation continues as long as the solvation rate is less than the crystallization rate.

true 17. In a saturated solution, solvation and crystallization are in equilibrium.

true 18. Additional solute can be dissolved in an unsaturated solution.

true 19. The solubility of a gas dissolved in a liquid decreases as the temperature of the solution increases.

Standards Matter Katherine Scheidler, 2017-05-01 While critics rail against Common Core State Standards for national school learning guides, few know exactly what these Standards are and fewer can assess if these Standards are a positive step for education. Standards are simply the high level

literacy skills and understandings that have been traditionally taught but only in some schools and for some students Standards focus on careful close reading and critical analysis help students develop ideas well in writing boost research understandings create skills to discern and write valid argument spark creative writing and release ability to learn on one's own for continued success in life and to help bring a brighter future to all students Do these Standards dumb down learning Do they stifle teachers creativity and independence Are they a low ceiling straitjacket for teachers Are bubble tests poor tests Are Standards unfair for urban and traditionally underperforming students In this brief volume the author spells out each Reading and Writing Standard to show that the Common Core State Standards simply guide high level achievement for all students invite teacher innovation and creativity and make school a more exciting place of learning The national tests include extensive writing and evaluate the understanding of ideas These Standards and tests ask students to investigate and learn to make their own decisions as we all should based on evidence The evidence provided here sheds light on excellent guides to help each child succeed Common Core State Standards are an opportunity to develop a common national base of high quality learning We must seize this chance to raise the bar in American education
