A **polygon** is a closed figure that is the union of line segments in a plane. A polygon has three or more sides.
A polygon has the same number of angles as sides.

Polygons can be classified as either **convex** or **concave**.

	A polygon is convex if no line that contains a side of the polygon contains a point in the interior of the polygon. In a convex polygon, each interior angle measures less than 180 degrees. Concave polygons "cave-in" to their interiors, creating at least one interior angle greater than 180 degrees (a reflex angle). Unless otherwise stated, we will be discussing convex polygons.
