The Mini Story Giles Chapman, 2011 Very few cars inspire as much affection as the original Mini It's the small car everyone loves to eulogise because it oozes energetic fun classless minimalism and evergreen style But it's also of massive historical importance the 1959 Mini designed by Alec Issigonis set the template from which all successful compact cars have been created ever after It was the technological wonder of its age The original Mini was on sale for 41 years during which its 5.3m sales made it the best selling British car of all time an achievement unlikely ever to be beaten And just when it looked like the little car would shrivel and die BMW had the vision to reinvent it as the planet's most desirable small car range and put it back on the serious motoring map as the MINI Here award winning writer Giles Chapman tells the whole amazing story

Minorities in Shark Sciences showcases the work done by Black Indigenous and People of Color around the world in the fields of shark science and conservation Edited by three minority researchers it provides positive role models for the next generation Highlighting new and important research done in the fields of biology ecology and evolution the book places emphasis on scientists with diverse backgrounds and expertise from around the world The heart of this book is that community and minority voices are important and have always been to science regardless of diplomas universities accolades western standards of academia Despite the use of the term Minorities most of the world s population do not identify as white nor male and in fact all minorities together comprise the global majority of humans For those in these historically underserved and underrepresented demographics it is meaningful to be highlighted and be given credit for their contributions This book showcases to the world the many Black Indigenous People of Color and LGBTQ scientists leading marine conservation both in terms of scientific research and science communication It has been shown in the literature that diversity in scientists creates diversity in thought which leads to innovation Strong minority voices are exactly what is needed to bring greater attention to the conservation of sharks and this book illustrates innovative science by people who were historically excluded from STEM It highlights the unique perspectives these scientists bring to their field that allow them to interact with stakeholders particularly in the areas of conservation and outreach As we continue to amplify these often forgotten voices through research outreach and engagement we hope to stimulate innovation and transformative change in the field of shark conservation and marine science     **The Publisher**
