The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body signals that control the movements. The nervous system is basically made of two systems: the central nervous system and the peripheral nervous system.

Central Nervous System

The central nervous system, or CNS, is made up of the brain and spinal cord. The brain is the most important part of the nervous system. It is located in the head and is the center of all the body's activities. The brain is made up of billions of nerve cells that are constantly sending and receiving information. The spinal cord is a long, thin, tube-like structure that runs down the back. It is made up of billions of nerve cells that are constantly sending and receiving information. The spinal cord is the main communication line between the brain and the rest of the body.

Peripheral Nervous System

There are all parts of the nervous system that are not the brain and spinal cord. The peripheral nervous system, or PNS, is made up of all the nerves that are outside the brain and spinal cord. The PNS is responsible for carrying information from the brain and spinal cord to the rest of the body. The PNS is made up of billions of nerve cells that are constantly sending and receiving information.

The PNS is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling the body's voluntary movements. The autonomic nervous system is responsible for controlling the body's involuntary movements. The autonomic nervous system is divided into two main parts: the sympathetic nervous system and the parasympathetic nervous system. The sympathetic nervous system is responsible for the body's "fight or flight" response, while the parasympathetic nervous system is responsible for the body's "rest and digest" response.

The brain is made up of billions of nerve cells that are constantly sending and receiving information. The brain is divided into two main parts: the cerebrum and the cerebellum. The cerebrum is the larger part of the brain and is responsible for most of the body's activities. The cerebellum is the smaller part of the brain and is responsible for coordinating movement and balance. The brain is also responsible for controlling the body's involuntary movements.
