The Englishwoman's Review of Social and Industrial Questions Janet Horowitz Murray, Myra Stark, 2016-12-19 The Englishwoman's Review which published from 1866 to 1910 participated in and recorded a great change in the range of possibilities open to women The ideal of the magazine was the idea of the emerging emancipated middle class woman economic independence from men choice of occupation participation in the male enterprises of commerce and government access to higher education admittance to the male professions particularly medicine and of course the power of suffrage equal to that of men First published in 1985 this seventeenth volume contains issues from 1884 With an informative introduction by Janet Horowitz Murray and Myra Stark and an index compiled by Anna Clark this set is an invaluable resource to those studying nineteenth and early twentieth century feminism and the women's movement in Britain

Gender and Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in

education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience **The High School Journal** ,1929
