- a. Convection is the transfer of energy as heat by movement of liquid or gas.  
An example is how it is warmer by the ceiling compared to the floor.

What is conduction? Give an example.

- a. Calorie and joule

What is thermal energy? Why would one substance have more thermal energy if two substances are at the same temperature?

- a. Thermal energy is the total kinetic energy of all particles in a substance. The larger the amount of liquid the more thermal energy it produces even if they are the same temperature.
