Remote Sensing Advances in Biodiversity and Ecosystem Functioning Research Zhouyuan Li, Weiwei

Sun,Yanjie Xu,Jixi Gao,Shijia Peng,2024-02-06 Different dimensions of biodiversity are increasingly appreciated as critical for maintaining the functions of ecosystems and their services to humans More recently with the emergence of functional biogeography functional diversity is of particular interest due to its strong links with ecosystem processes such as carbon water and energy exchange and climate mitigation The multi form diversity varies in space and time Understanding this variation across scales is important for tracking the resilience of Earth s ecosystem and the information on the ecosystem structural features provides necessary foundations for monitoring predicting the ecosystem functioning patterns and process of ecosystems from individual unit to its whole in a holistic manner In recent the high resolution high throughput non intrusive and large scale data on biodiversity monitoring and measurement are becoming a new trend toward enhancing the efficiency and coherency in ecological discovery Still the available multi scale data on multi dimensional diversity are incomplete and non representative taxonomically geographically and temporally Although the studies on functional traits and their relations with function continue to grow local observations on functional traits are limited Recently remote sensing has proved to be a critical technology for addressing this research gap Air and satellite borne spectrometers at different levels could develop novel diversity measurements and alternati

Vegetation Index and Dynamics - Methodologies for Teaching Plant Diversity and Conservation Status Eusebio Cano Carmona,Ana Cano Ortiz,2024-02-07 This book contemplates methodologies that can be used in the teaching of future experts in agriculture and plant cultivation It expresses the need for knowledge transfer for good territorial management in the current era of climate change In most cases land management at the planetary level is sustainable but today s society demands sustainable development To improve the training of technicians in sustainable development methodologies this book presents some methods and techniques compatible with ecodevelopment

Application of Plant Biodiversity for Improving Nutrient Cycling Katja Witzel,Christoph Martin Geilfus,Christian Roger Marc Hermans,2022-11-14 The current agricultural plant production system is dominated by mono cropping with genetically uniform cultivars This genetic erosion has led to a displacement of locally adapted landraces and cultivars and poses a serious threat to plant productivity in stressed agro ecosystems The adaptation of crops to drought heat salinity and low soil fertility is becoming paramount due to global climate change Utilizing exotic or underused germplasms as a source of adaptive traits is a largely untapped way to ensure a stable yield The task to apply biodiversity in crop production to confer food security and sustainability was acknowledged by the Food and Agriculture Organization of the United Nations and reflected by the United Nations Sustainable Development Goals In many parts of the world poor soil fertility threatens yield stability Therefore the soil nutrient reserve must be replenished to sustain crop yield Mineral fertilizer in excess however is detrimental to the environment For instance elevated loads of nitrogen phosphorus or chlorine pollute water bodies and impact on biodiversity Major anticipated concerns for our agricultural systems are the limitation in phosphorus temperature increase extreme and unpredictable weather events and salinity Therefore

environmentally friendly strategies to optimize nutrient cycling are urgently required and this involves increasing nutrient use efficiency. In the face of climate change it is necessary to mine crop biodiversity to increase nutrient uptake and usage and to help implement a Zero Waste concept in plant nutrition. This Research Topic is intended to provide an updated view on the use of crop biodiversity to open new avenues for improved nutrient cycling. We welcome contributions: Original Research, Review, Mini Review, and Perspective covering any of the following aspects: Studies on improving nutrient fluxes through control of production factors both in controlled environments and in the field; horticulture, agriculture; Screening and application of genebank material for improved nutrient use efficiency; Studies on the effect of combining novel crop species; multi-cropping, intercropping, rotations; cover cropping on crop performance and nutrient availability; Effect of mutualistic species, mycorrhiza or bacteria on nutrient cycling, e.g. improvement of nutrient uptake and by mutualism; Climate change driven effects on nutrient cycling, e.g. how do different temperatures, precipitation influence nutrient cycling through soils.

Field Manual on Alien Flora of Kashmir Himalaya Ruquia Gulzar, Anzar Ahmad Khuroo, Irfan Rashid, 2024-01-05. The book *Field Manual on Alien Flora of Kashmir Himalaya: Casual, Naturalised and Invasive Plants* has been prepared with two main goals in mind: i) to promote awareness on the threats of invasive alien plants to biodiversity, ecology and environment, and ii) to encourage research on and management of the alien plants. The Manual contains concise information on the taxonomy, ecology, invasion status, impacts, distribution, and illustrated photo plates of the alien plant species of Kashmir Himalaya, India. The Manual has three chapters. Chapter I provides a general introduction to the discipline of invasion ecology. Chapter II guides the readers on how to use the Manual, including brief information on the study region, methods, definitions, and terminology used. Chapter III comprises the bulk of this Manual, providing a profile of 100 alien plant species with scientific information on the botanical, English and local names, taxonomic characters, ecological traits, current invasion status, casual, naturalised and invasive impacts, native range, species distribution map in Kashmir Himalaya, and coloured illustrations that will aid in field identification. It is hoped that the Manual will increase awareness on the threats posed by plant invasions among all the stakeholders: researchers, land managers, policy makers, environmentalists, naturalists, citizen scientists, students, and the general public. It will also help in promoting research, formulating policies, and planning management actions to deal with invasive alien species.
