

Now the sense of depth associated with the colours is in conflict with the spatial depth of the objects. Although the furthest object is furthest away, its colour attracts the most attention and brings it to the front.

Using more saturated colours on the objects in the front creates the sense of depth. Objects further away have less saturated colours.

Colour theory

In the book applied visual colour theory, all colours are expressed in terms of their hue, saturation and brightness (s.v.). Using the colour theory can help you identify and choose colour schemes.

Here are some widely used colour schemes to create unity:

- Monochromatic: a colour has various shades and tones.
- Analogous colours next to each other on the colour wheel. Differences in saturation can be applied. This scheme is generally perceived as calm and serene.
- Complementary colours opposite each other on the colour wheel. Usually this is perceived as dynamic and active. (Search and sky).
- Triadic colours derived from the colour wheel as a triangle. The best known examples of this is the primary colour combination, which is very appealing to children (play and this is their first large product line).

Be aware with an analogous colour scheme only few small colour contrasts. Of course, contrasts such as dark versus bright colours when various shades and tints for colour are applied. The usage of the saturation degree and the colour scheme (the colour wheel) need to it shows which colour is less than used.

Camilleri, 2023-05-31 Sketching is a natural and intuitive communication tool used for expressing concepts and ideas that are difficult to communicate through text or speech alone In design applications drawings are used at various stages of the design process from the early concept drawings scribbled on a piece of paper to immersive interactions in which users manipulate and adjust the 3D form of an object in virtual or augmented reality environments This variety in drawing activities brings about the need for different interpretation strategies that support not only the sketching activity itself but also allow sketch based interactions such as sketch based queries to take place In this book we explore the different drawing approaches used in design and the algorithms required for processing and interpreting the different sketches and drawings in design The book is divided into two parts The first part focuses on sketching in the 2D domain This includes the digitization of offline and paperbased sketches techniques for online sketch recognition observations of user drawing habits algorithms for inferring depth from 2D drawings as well as non photorealistic rendering techniques that are then applied to sketch based queries The second part of the book focuses on 3D sketching in virtual or augmented reality spaces Here we present the processing and rendering of the 3D strokes the different interaction devices available for 3D sketching and look at different applications where immersive 3D sketching has been applied with success *Fashion Drawing* John
