Brian Male, Mick Waters, 2012-12-20 Schools across the world are struggling to balance the statutory requirements of a national curriculum with their desire to provide the wide engaging and exciting curriculum that they know children need. Concerns about standards often lead to a narrowing of the curriculum and many schools lack the confidence and approach to design that would enable them to resolve what seems like an impossible dilemma. In this authoritative yet engaging book, Brian Male and Mick Waters look at how schools can meet the requirements of a national curriculum and yet be flexible enough to meet the needs, interests and concerns of pupils to be rooted in their lives and localities and to give scope for teachers to use their own creativity. The Secondary Curriculum Design Handbook is a practical guide to designing a curriculum that will engage children's interest, excite their imaginations and at the same time provide them with the knowledge, skills and understanding they need to live successfully in the 21st Century. Secondary STEM Educational Reform C. Johnson, 2011-11-21 Federal and state funding agencies have invested billions of dollars into secondary STEM. Science, Technology, Education, Mathematics educational reform over the past decade. Being A Teacher in the 21st Century Leon Benade, 2017-03-01 This book provides scholars, teacher educators as well as reflective school leaders and teachers with valuable insights into what it is to be a teacher in the 21st century. It does so by presenting original research based on a study of several New Zealand schools between 2013 and 2015 and in particular a focussed study of four of those schools in 2015. The book draws on the findings to take stock of some of the central manifestations of 21st century learning, especially digital pedagogies and the collaborative practices associated with teaching and learning in modern learning environments. It reflects on the mental shifts and sometimes painful transitions teachers and leaders are making and experiencing as they enter uncharted waters moving from traditional classroom practices to ones that emphasise collaboration, teamwork and the radical de-centring of their personal roles. It outlines a blueprint for understanding how to navigate these changes and describes and explains the nature of pedagogical shifts apparent in digital classrooms and modern learning environments. **Global Warming and Social Innovation** Andre Faaij, David Jager, Marcel Kok, 2013-06-17 Societies need to reduce emissions of greenhouse gases by 80 per cent in order to counter the risks of climate change. This study envisions a climate neutral society, one where the output of polluting gases is minimised by social innovations set up in households by local authorities through developments in information and communications technologies and dematerialization and through the shift towards product service systems and emissions trading. The work discusses the possibilities for steering and orchestrating this long term transition towards a climate friendly society, mapping paths through
