Introduction

When a company with a well-established supply chain enters the sustainability space, it is understandably with trepidation, and in the best-case scenario, with curiosity and a willingness to experiment. In order to drive sustainability changes, there are a plethora of places to start – from shifting consumer buying patterns, to farmers' production practices, to corporate culture. Commonly, large multinationals rely on multiple product streams going into multiple product lines; the task to "green" the entire supply chain is daunting, and the process iterative. A company must do two things over and over again. First, the company must find the appropriate tools to help prioritize a starting place. Second, once this prioritization process happens, the company must dig into an evolving toolbox of items which can drive sustainability down the supply chain and ensure compliance in the areas that the company is seeking sustainability. Finally, the company must follow these steps over and over again – capturing learning as the tools are applied – and then re-evaluating its sustainability priorities up and down the supply chain.

To assist Unilever with this iterative process, Unilever requested two primary tasks. First, Unilever wanted high-level strategies and frameworks with which the company can make decisions about where to begin implementing sustainability measures across its vast supply chain. Second, Unilever asked for a discussion of ways that the company could drive sustainability down the supply chain and verify supply chain sustainability compliance, particularly in cases where Unilever did not use 3rd party certification schemes. To satisfy Unilever's requests, our team began by researching background information on Unilever and its sustainability values and practices, using mainly external literature sources and the limited internal Unilever documents for which we had access. We also tapped into MIT's network of sustainability experts in the Media Lab and Center for Transportation and Logistics. After several brainstorming sessions discussing various prioritization schemes that Unilever could employ, we developed a supply chain prioritization tool called the Sustainability Stakeholder Rating Tool (SSRT). Taking into account the complex supply chain ecosystem, the tool is meant to prioritize supply chain actions based on a combination of financial, social, and environmental consideration in various product lines (dairy, oil, and vegetables) from the perspective of Unilever's main stakeholders.

The culmination of these exercises is reported below and is split into four sections. First, the paper provides a background on Unilever as a company. Second, this document discusses several lenses with which Unilever may view their options to find the most optimal starting point or points to enact sustainability measures. The paper then demonstrates one such tool, Sustainability Stakeholder Rating

The Innovation Blind Spot Ross Baird, 2017-09-12 Our innovation economy is broken. But there's good news: The ideas that will solve our problems are hiding in plain sight. While big companies in the American economy have never been more successful, entrepreneurial activity is near a 30-year low. More businesses are dying than starting every day. Investors continue to dump billions of dollars into photo sharing apps and food delivery services, solving problems for only a wealthy sliver of the world's population, while challenges in health, food security, and education grow more serious. In The Innovation Blind Spot, entrepreneur and venture capitalist Ross Baird argues that the innovations that truly matter don't see the light of day for reasons entirely of our own making. A handful of people in a handful of cities are deciding behind closed doors which entrepreneurs get a shot to succeed. And most investors are what Baird calls "two-pocket thinkers," artificially separating their charitable work from their day job of making a profit. The resulting system creates rising income inequality, stifled entrepreneurial ambition, social distrust, and political uncertainty. Our innovation problem makes all our other problems harder to solve. In this book, Baird demonstrates how and where to find better ideas by lifting up people, places, and industries that are often overlooked. What's more, Baird ultimately outlines how to create long-term success through one-pocket thinking, eliminating the blind spot that separates what we do for a living and what we really care about. **El cambio climático**

Supply Chain Transparency ManMohan S. Sodhi, Christopher S. Tang, 2018 More firms than ever before are disclosing provenance of their products results of product testing and suppliers labor practice compliance with western norms in annual reports sustainability reports and press releases besides making it available on third party websites The problem remains however that companies find collecting and disclosing such information not only to be costly and complicated but also do not understand the benefits To motivate further research on supply chain transparency we first report recent examples of companies providing supply chain transparency We also present potential benefits of supply chain visibility and supply chain transparency separately for the company While terminology has not yet been standardized this paper distinguishes visibility managers efforts to learn more about operations upstream in their supply chains from supply chain transparency by which we mean a company disclosing information to consumers investors and other stakeholders about compliance to consumer expected norms in its supply chain operations and products Finally we propose some topics for research on supply chain
