This book is organized into nine chapters that discuss wave equations as solutions to linear differential equations. After briefly dealing with the fundamentals of waves and pulsed waves, this book goes on discussing the effect of introducing either an impulse or a steady source into a stream of uniform velocity or the so-called one-dimensional flow. The following chapters present some simplest basic equations for parameter determination in a flowing medium. These chapters also describe the pulses at an ideal boundary and the behavior of sine waves at such boundary including the concept of reflections and the ease with which sine waves overcome the problems of incorporating boundary conditions into an experimental determination. This text further examines the behavior of reservoir phases under time-varying temperature or concentration. A chapter focuses on high-precision experimental measurements of sine waves. The concluding chapter outlines the computational processes with emphasis on the estimation of experimental errors because of their effect on the reliability of parameter determination. Topics covered in the supplementary texts include the transformation of variables, the evaluation of important integrals, the normal distribution curve, aspects of the Laplace transform, some forms of transport equation common to both heat and mass transfer processes, and the interference of waves. This book will be of value to physical chemists, chemical and petroleum reservoir engineers, process metallurgists, physiologists, hydrologists, and soil scientists. *Nanofiber Filter Technologies for Filtration of Submicron Aerosols and Nanoaerosols* Wallace Woon-Fong Leung, 2021-10-30 Nanofiber Filter Technologies for Filtration of Submicron Aerosols and Nanoaerosols covers the nanoaerosols less than 100 nanometers to larger submicron aerosols due mostly to pollution which are present in high number concentration in our surroundings. People are breathing these nanoaerosols daily without being aware of it. Airborne viruses from flu to coronaviruses are also nanoaerosols. During the COVID-19 pandemic, it took a long time for health authorities and the general public to recognize the airborne transmission mode of the virus. This leads to inadequate protection and ineffective virus control strategies resulting in high infection and death rates. The book cites evidence and observations pointing to the airborne transmission mode of the coronavirus. It also discusses different filtration technologies using nanofibers to capture these aerosols for short-term filtration where aerosols are trapped in the filter depth filtration and long-term filtration where aerosols are trapped in the growing filter cake cake filtration. This book provides a good understanding on how nanofibers which is of size 1/1000 times that of a normal human hair can effectively filter these tiny aerosols. NFT organized in four sections: fundamentals, deep understanding, technologies, and application covering

comprehensively on the subject is a valuable resource for undergraduates and graduates engineers researchers and practitioners in related industries Describes technologies with insight and use basic engineering principles to build up technologies Includes extensive clear and understandable figures and tables to enhance key concepts Uses examples throughout to explain engineering principles and interdisciplinary concepts The only book in the market focusing on nanofiber filter technologies for filtering submicron aerosols and nanoaerosols Prophetic Literature Ronald L. Troxel,2011-10-26 Prophetic Literature From Oracles to Books presents an in depth introduction to the origins and development of the Prophetic Books of the Old Testament including an examination of the literary structure authorship and editorial processes that produced each book The only introductory textbook that explores both how the prophetic books were composed and edited Accessible and engaging the book contains numerous student features to encourage learning including introductions summaries tables and boxes etc Based on international scholarship on the individual prophetic books including German scholarship that is otherwise inaccessible to most English readers **Current Housing Reports** ,1990

Operation Research Anup Goel, Ruchi Agarwal, 2021-01-01 Operations research is the fast developing branch of science which deals with the most of the engineering activities It consist of many models which are used to obtain the optimum solution for different activities Operations research is a procedure which is executed iteratively for comparing various solutions till the optimum or satisfactory solution is obtained An important aspect of the optimal design process is the formulation of the problem in a mathematical format which is acceptable to an algorithm and thus find out the optimal solution These techniques are extensively used in those engineering design problem where the emphasis is on maximising or minimising a certain goal This book is the introduction to the different techniques in operations research The subject does not require a high level of mathematical knowledge Each chapter of the book have examples from variety of fields Our hope is that this book through its careful explanations of concepts practical examples and techniques bridges the

gap between knowledge and proper application of that knowledge *Greening the College Curriculum* Jonathan Collett, Stephen Karakashian, 2013-04-10 *Greening the College Curriculum* provides the tools college and university faculty need to meet personal and institutional goals for integrating environmental issues into the curriculum. Leading educators from a wide range of fields including anthropology, biology, economics, geography, history, literature, journalism, philosophy, political science, and religion describe their experience introducing environmental issues into their teaching. The book provides a rationale for including material on the environment in the teaching of the basic concepts of each discipline, guidelines for constructing a unit or a full course at the introductory level that makes use of environmental subjects, sample plans for upper level courses, a compendium of annotated resources, both print and nonprint. Contributors to the volume include David Orr, David G. Campbell, Lisa Naughton, Emily Young, John Opie, Holmes Rolston III, Michael E. Kraft, Steven Rockefeller, and others.

Using Informational Text to Teach The Great Gatsby Audrey Fisch, Susan Chenelle, 2018-03-22 The Common Core State Standards initiated major changes for language arts teachers, particularly the emphasis on informational text. Language arts teachers were asked to shift attention toward informational texts without taking away from the teaching of literature. Teachers, however, need to incorporate nonfiction in ways that enhance rather than take away from their teaching of literature. The *Using Informational Text* series is designed to help. In this fourth volume, Volume 1: *Using Informational Text to Teach To Kill a Mockingbird*, Volume 2: *Using Informational Text to Teach A Raisin in the Sun*, Volume 3: *Connecting Across Disciplines: Collaborating with Informational Text*, we offer challenging and engaging readings to enhance your teaching of *Gatsby*. Texts from a wide range of genres: a TED Talk, federal legislation, economic policy material, newspaper articles, and 1920s political writing, and on a variety of topics: income inequality, nativism, and immigration, anti-Semitism, the relationship between wealth and cheating, the Black Sox scandal, and newspaper coverage, and prohibition, help students answer essential questions about F. Scott Fitzgerald's novel. Each informational text is part of a student-friendly unit with media links, reading strategies, vocabulary, discussion, and writing activities, and out-of-the-box class activities.
