

# Speciation

Label each scenario with the Type of speciation (allopatric, sympatric, parapatric, sympatric, or artificial) and explain your answer.

Two separate squirrel species inhabit the north and south side of Arizona's Grand Canyon. Scientists suspect they have been separated since the Canyon formed. They think that an ancestor species of squirrel was split into two separate populations when the Canyon formed.

1. Type of speciation \_\_\_\_\_

2. Explain your answer:

\_\_\_\_\_

Maggot flies (a fruit that looks sort of like cherries) maggot flies only used to mate and lay their eggs on northern fruit trees. When apples were introduced in the 1800s for immigrants to America, some maggot flies began to also breed and lay their eggs on apples. Females prefer to breed on fruit. They grew up on it, so two separate populations are beginning to form who rarely breed together.

3. Type of speciation \_\_\_\_\_

4. Explain your answer:

\_\_\_\_\_

Hawaiian flightless crickets. Quickly over only 20 generations, crickets developed mutated flat wings that made them unable to call their mates. Scientists believe they developed these wings because the crickets who happened to have no wings were able to avoid a parasitic fly. The fly locates crickets by their mating songs. These Hawaiian crickets were from a small population that broke off of a larger population of crickets from the mainland.

5. Type of speciation \_\_\_\_\_

6. Explain your answer:

\_\_\_\_\_

A particular type of grass is growing near a mine. The ground over a wide distance becomes contaminated with heavy metal poisons. Some grass near the mine becomes resistant of the poison, but with tolerance comes a change in flowering season. Because the poison-resistant grass plants bloom and reproduce at a different time of year than the non-resistant plants living on non-contaminated ground nearby, they diverged and formed two separate species.

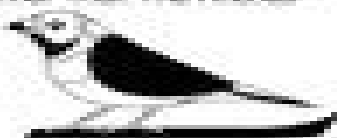

7. Type of speciation \_\_\_\_\_

8. Explain your answer:

\_\_\_\_\_

Groups of the ancestor of modern day finch species settled on different ecological islands. The islands were far enough apart from each other that the finches from different islands rarely meet each other. Over time, they developed different mating habits and different beak sizes and shapes. They can no longer mate with each other.

9. Type of speciation \_\_\_\_\_

10. Explain your answer:

\_\_\_\_\_

Leafcutter ant colonies carefully maintain their fungal gardens. They keep one specific fungus in their garden and they quickly remove any fungus that is not of the specific breed of fungus that they grow. In this way, the fungi that grow in their garden may, over time, become different enough from other outside fungi to be unable to breed with outside fungi.

11. Type of speciation \_\_\_\_\_

12. Explain your answer:

Barraclough, 2019-06-20 Species are central to understanding the origin and dynamics of biological diversity explaining why lineages split into multiple distinct species is one of the main goals of evolutionary biology However the existence of species is often taken for granted and precisely what is meant by species and whether they really exist as a pattern of nature has rarely been modelled or critically tested This novel book presents a synthetic overview of the evolutionary biology of species describing what species are how they form the consequences of species boundaries and diversity for evolution and patterns of species accumulation over time The central thesis is that species represent more than just a unit of taxonomy they are a

model of how diversity is structured as well as how groups of related organisms evolve The author adopts an intentionally broad approach stepping back from the details to consider what species constitute both theoretically and empirically and how we detect them drawing on a wealth of examples from microbes to multicellular organisms , The Character Concept in Evolutionary Biology Günter P. Wagner,2000-10-31 Almost all evolutionary biologists indeed all biologists use particular features to study life These characteristics or features used by evolutionary biologists are used in a particular way to unravel a tangled evolutionary history document the rate of evolutionary change or as evidence of biodiversity Characters are the data of evolutionary biology and they can be employed differently in research providing both opportunities and limitations The Character Concept in Evolutionary Biology is about characters their use how different sorts of characters are limited and what are appropriate methods for character analysis Leading evolutionary biologists from around the world are contributors to this authoritative review of the character concept Because characters and the conception of characters are central to all studies of evolution and because evolution is the central organizing principle of biology this book will appeal to a wide cross section of biologists Focuses upon characters fundamental data for evolutionary biology Covers the myriad ways in which characters are defined described and distinguished Includes historical morphological molecular behavioral and philosophical perspectives *Chemical Processes* Open University. illustrated comprehensive key for identifying amphibians and reptiles from the continental United States and Canada incorporates a wealth of scientific findings Since the first edition was published in 1998 and the second in 2012 the number of currently recognized species of native amphibians and reptiles in the area covered by this key has increased from 545 to 634 to 685 and the number of established non native species has increased from 39 to 58 to 67 The increase in native taxa reflects the dynamic nature of modern systematics and the use of new especially molecular techniques to elucidate relationships and redefine species boundaries The increase in non native species reflects the porosity of the North American borders when it comes to controlling animal imports The key is easy to use and illustrated with outstanding line drawings that show details of color patterns and structures used for identification To accommodate the additional taxa the number of line drawings in this third edition has increased from 257 to 279 to 295 In addition nine maps illustrate the distributions of species that have been recognized since the publication of maps in the most recent editions of the Peterson Field Guides to the reptiles and amphibians of eastern central and western North America A large number of annotations detail current taxonomic ambiguities or disagreements and the literature cited has been expanded Collectively these features enhance opportunities to teach and learn the classification and identification of amphibians and reptiles in the continental United States and Canada

*Island Biogeography* Robert J. Whittaker, José María Fernández-Palacios, Thomas J. Matthews, 2023-06-22

Island biogeography is the study of the distribution and dynamics of species in island environments Due to their isolation from more widespread continental species islands are ideal places for unique species to evolve but they are also places of concentrated extinction Consequently they are widely studied by ecologists evolutionary biologists and conservationists This accessible textbook builds on the success and reputation of its predecessors documenting the recent advances in this exciting field and explaining how islands have contributed to both theory development and testing In addition the book describes the main processes of island formation subsequent dynamics and eventual demise explaining the relevance of island environmental history to island biogeography The authors demonstrate the significance of islands as hotspots of biodiversity and of prehistoric and historic anthropogenic extinction Since island species continue to feature disproportionately in the lists of threatened species today the book examines both the chief threats to their persistence and some of the mitigation measures that can be put in play with conservation strategies specifically tailored to islands

## The Enigmatic Realm of **Unit 3 Speciation Answer Sheet**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing lacking extraordinary. Within the captivating pages of **Unit 3 Speciation Answer Sheet** a literary masterpiece penned with a renowned author, readers set about a transformative journey, unlocking the secrets and untapped potential embedded within each word. In this evaluation, we shall explore the book's core themes, assess its distinct writing style, and delve into its lasting effect on the hearts and minds of those that partake in its reading experience.
